Programming adapter with USB interface

### Function

The K-ADP-USB is a programming adapter that connects the USB interface of a PC for the **PACTware** operating software and can be used to program K-, E- and H system devices via the programming socket on the front panel of these devices. As K-, E- and H-System devices have formerly been equipped with programming sockets with different standard dimensions (3.55 mm x 18.3 mm, see drawing, pos. 3 – newer devices 3.5 mm x 14 mm, pos. 1), an adapter (pos. 2) for the parameterisation of all devices is attached to K-ADP-USB.

The 18.3 mm version can still be used for urgent service assignments. However, the user must be aware of the fact that the plug protrudes from new units by approx. 4 mm. Extensive pushing of the plug may lead to damage on units. For information about programming and operating software, refer to [www.pepperl-fuchs.com](http://www.pepperl-fuchs.com).
