

Zener Barrier

Z787.F

- 2-channel
- DC version, positive polarity
- Working voltage 26.5 V at 10 μA
- Series resistance max. 341 Ω
- Fuse rating 50 mA
- DIN rail mountable
- Replaceable back-up fuse
- With diode return

Function

The Zener Barrier prevents the transfer of unacceptably high energy from the safe area into the hazardous area.

The zener diodes in the Zener Barrier are connected in the reverse direction. The breakdown voltage of the diodes is not exceeded in normal operation. If this voltage is exceeded, due to a fault in the safe area, the diodes start to conduct, causing the fuse to blow. The Zener Barrier has a

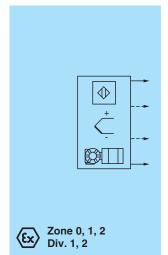

positive polarity, i. e. the anodes of the zener diodes are grounded.

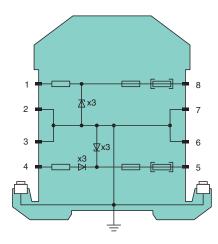

Additionally this Zener Barrier is equipped with a replaceable fuse.

The Zener Barrier is for evaluation of signals from the hazardous area. The diodes of diode return prevent a current into the hazardous area, therefore the current assumption for intrinsic safety calculations is zero.

Depending on the application, increased or decreased intrinsic safety parameters apply for serial or parallel connection. For the detailed parameters refer to the Zener Barrier certificate. Application examples can be found in the system description of the Zener Barriers.

Connection

Technical Data

Release date: 2023-04-18 Date of issue: 2023-04-18 Filename: 072178_eng.pdf

General specifications	
Туре	DC version, positive polarity
Electrical specifications	
Nominal resistance	300 Ω
Series resistance	max. 341 Ω
Fuse rating	50 mA
Hazardous area connection	
Connection	terminals 1, 2; 3, 4
Safe area connection	

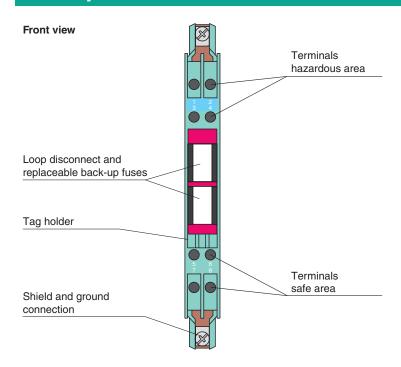

Refer to "General Notes Relating to Pepperl+Fuchs Product Information"
