## Strain Gauge Input for

## Melt Pressure & Load Cell Transducers

### 1/8 DIN - 96x48 mm

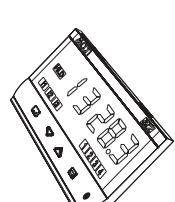

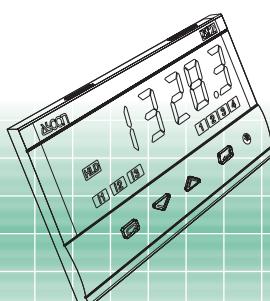

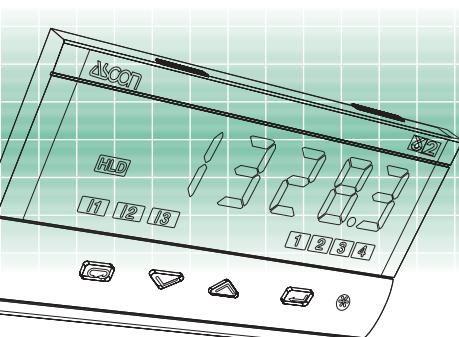

### gamma<sup>due</sup><sup>®</sup> series, J5 line

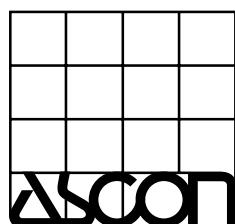

Accurate measurement of melt pressure and other process variables are provided by J5. The J5 is fully configurable from the keyboard or by means of a software configuration tool. The J5 display utilizes a large, bright 5 digit LED that can be configured to operate in green or red. The display can be configured to change color when in alarm condition.

- **Accuracy:** 0.1%
- **Measurement resolution:** 16 bit.
- **Overall response time:** 20 ms.
- **Display resolution:** configurable 1... 100 digit.
- **Main input:** 350Ω strain gauge, linear DC voltage and DC current. Square root extraction. 16 segments linearizer for "custom" input.

- **Second input:** DC voltage and DC current. Suitable for temperature indication and signal conditioning (min., max., average, ratio, etc.) when combined with the Main input.
- **3 Digital inputs:** Independently configurable for alarms, display, and calibration handling...
- **Alarms:** 2 or 4 with ISA-A acknowledge.
- **Retransmission output:** optional, DC current
- **Communications:** optional, Modbus RS485.
- **Parameters protection:** 3 password levels.
- **Front protection:** IP65.

  
E

ISO 9001 Certified

## J5 line

### The right solution for Melt pressure and Load cells applications

The  $350\Omega$  strain gauge bridge of the Melt pressure or load cell transducer can be energized by an internal stabilized 5 or 10Vdc. The reliability of the strain gauge is continuously monitored.

A simple front panel calibration routine is provided to automatically remove zero and span offsets. The automatic calibration routine can also be activated by using one of the three standard digital inputs, as well as being activated over serial communications. Tare function for load cells application is also provided.

Also available with the J5 indicator are: analogue retransmission, RS485 Modbus communications and additional configurable relay alarms with ISA type A alarm functions make the J5 indicator ideal to meet the most demanding monitoring requirements.

### Special functions

**Keyboard lock/unlock:** to prevent unauthorized operator actions

**Outputs lock/unlock:** to set the outputs to OFF

**MIN** to display the maximum or the minimum stored value, using the (max.) or (min.) keys.

**Peak and Valley of PV:** to display the maximum and minimum read values in the following 2 modes

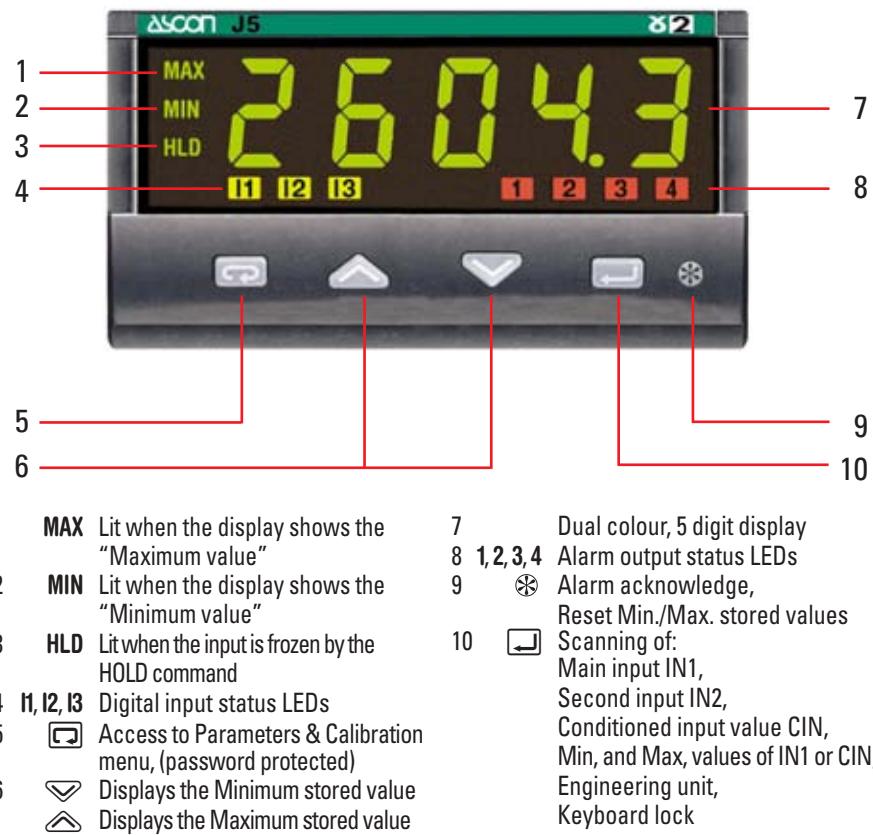

- 1) **Positive/Negative Hold Peak Display,** The displayed value is updated when higher/lower peak is detected.
- 2) **Positive/Negative Timed Peak Display,** The Peak value is displayed for a programmable period of time.

**HOLD PV:** The inputs and all the other functions (alarms, retransmission, etc.) are frozen on the last value until the Hold PV is active.

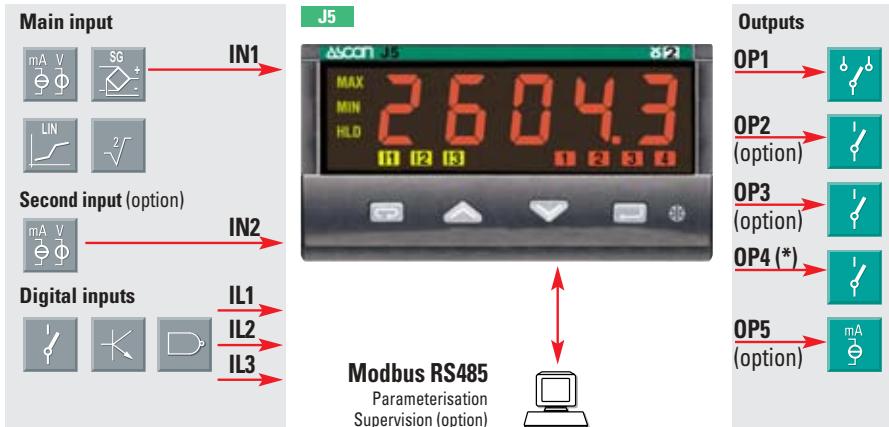

**Conditioned Input (CIN):** CIN is the result of IN1 conditioned by IN2.

**NO/NC Alarm status:** The relay contact status can be configured by default as either Normally Open (NO) or Normally Closed (NC).

### Display and key functions in operator mode

### Resources

### Special functions

### Digital inputs (IL1, IL2 or IL3) functions

\* Note: OP4 output can be used for calibration shunt when strain gauge automatic calibration is required.

## Technical data

Features at 25°C env. temp.	Description																				
Dual colour display	5 digit, high efficiency, height 15 mm, limits: -9999... 99999 red or green configurable depending on the user needs and/or the alarm status

## Measure conditioning

Primary input IN1 can be Conditioned by the secondary input IN2; the conditioned input ( $C_{in}$ ) can be:

Id	Description
$C_{in1}$	$C_{in} = IN1$
$C_{in2}$	$C_{in} = IN2$
$Sum$	$C_{in} = IN1 + IN2$
$Sub$	$C_{in} = IN1 - IN2$
$Avg$	$C_{in} = (IN1 + IN2)/2$
$Max$	$C_{in} = MAX (IN1, IN2)$
$Min$	$C_{in} = MIN (IN1, IN2)$
$Prod$	$C_{in} = IN1 * IN2$
$Ratio$	$C_{in} = IN1/IN2$

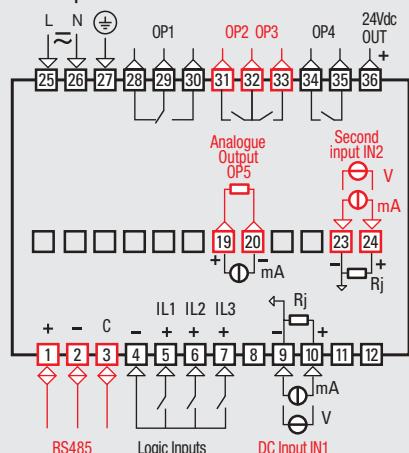

## Default display variable

Variables that must be displayed as default include:

Id	Description
$I_{in1}$	Input 1
$I_{in2}$	Input 2
$C_{in}$	Conditioned input
$L_{in}$	Minimum stored value
$H_{in}$	Maximum stored value
$Unit$	Selected engineering unit

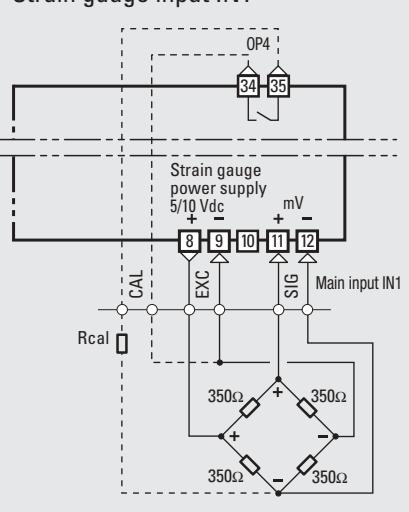

## Electrical wiring

### DC input IN1

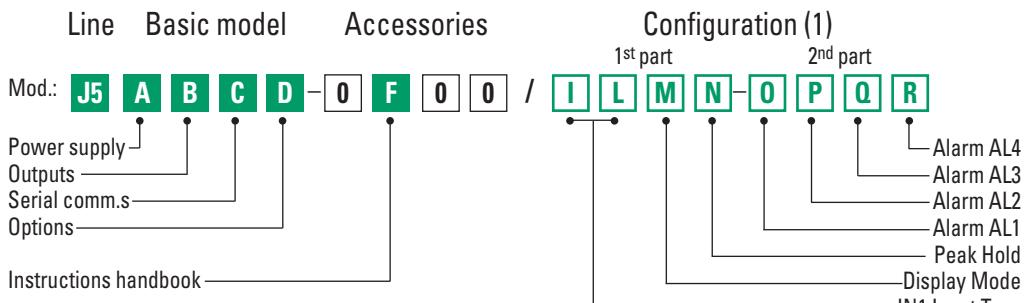

Note: The terminals in red are optional

### Strain gauge input IN1

## Ordering Codes

Power supply				<b>A</b>
100...240Vac (-15...+10%)				3
24Vac (-25...+12%) or 24Vdc (-15...+25%)				5
OP1 OP2 OP3 OP4 (2) outputs				<b>B</b>

### Notes:

- If the configuration code is not specified, the J5 is supplied with the default configuration:  
J5 \_\_\_\_ - \_\_\_\_ / 0000 - 0000.
- OP4 output can be used for high end scale calibration of the strain gauge.
- Configuration examples:
  - For strain gauge transducer rated 350Ω, 3.3 mV/V, 10 V excitation Voltage, select: **I: 1, L: 2;**
  - For standard transmitter 4... 20 mA, select: **I: 8, L: 0.**

IN1 Input range	IN1 Input Type	<b>I</b>	<b>L</b>	
DC input 0... 20mV		0	0
