model eP
M.I. eP 4-00/18.06

Cod. ISTR-MIeP4ENGOO

## Installation Manual

## Contents

- General description
- Accessories
- Installation
- Electrical connections
- Electric safety

General description

Model identification label (on the back side of the module);
DIN RAIL $35 \times 7.5$ (EN50022);
Xt 24 Vac Power Supply plug;
X2 OP1... OP2 Digital Output SPST relay or 24 Vdc SSR drive; X3 OP3... OP4 Digital Output SPST relay or 24 Vdc SSR drive;
5 X4 COM2 RS485 serial port and SW2 switches for line settings;
X5 24 Vdc input for DØ1... DØ8 when configured as Digital Output;
X6 DØ1... DØ8 configurable DI/D0 + 2 DI pulse counters (CNT1, CNT2); X7 24 Vdc input + DØ9... D16 configurable DI/D0;
X8 5 V Ratiometric, 12 Vdc Al Power and All... Alt universal analog input;
9 X9 A01... A02 mA or V analog outputs;
X10 A03... A04 mA or V analog outputs;
10 Status/diagnostic LED (PWR, RUN, MSG, USB, COMS) + Reset Button;
11 X11 USB micro AB type port;

I/O expansion module with 3 connection options

L N E

## Mounting position

- Mount the module vertically;
- In order to help the air ventilation flow, respect the distances between modules and walls or other modules.

Mounting position (mm)

## Disposal

The appliance (or the product) must be disposed of separately in compliance with the local standards in force on waste disposal.

Operating conditions

## Mounting/removing the modules on/from the DIN rail

1 Open the 2 spring slides on the lower part of the CPU, clip the upper part of the module to the rail;
2 Rotate the module downwards, then close the 2 spring slides;
3 Switch OFF the Power Supply. Lower the spring slide by inserting a flat-blade screwdriver as indicated;
4 Turn and lift the module upwards to remove the CPU from the DIN rail.

Mounting the module

Removing the module

## Terminals connections and plugs

| Description |  | Plugs of all terminals |  |
| :--- | :--- | :--- | :--- |
| Flexible cable section: | Pitch $5 \mathrm{~mm}:$ <br> Pitch $3.5 \mathrm{~mm}:$ | $0.2 \ldots 2.5 \mathrm{~mm}^{2}$ (AWG24... AWG12) |  |
| $0.14 \ldots 1.5 \mathrm{~mm}^{2}$ (AWG28... AWG16) |  |  |  |

Technical data:

- The green terminals are male connectors (pitch 3.5 or 5 mm ), the correspondent female connectors have screw or spring terminals for connecting the wires;
- Made with self extinguishing material as required by UL94 V0 standard;
- Overvoltage cathegory/pollution degree II/2;
- Max. load current/section $8 \mathrm{~A} / 2.5 \mathrm{~mm}^{2}$ at $65^{\circ} \mathrm{C}$;
- Test pulse voltage: 4 kVp .

Make sure that the overall current absorption (modules and field devices) matches the power supply;
In order to avoid excessive voltage drops, install the most power consuming modules closer to the power supply.

## X1 - Power supply

- Connector X1: 24 VDC
(-10... +15\%), 15 W max..

## X6 - Digital Inputs D01... Dø8 Connections

- Example of connection when DØ1... DØ8 are configured as Digital Inputs;
- Isolation: 800V between the Digital Inputs and the Main Electronics;

For proper electrical connection refer to X5/X7 - Power supply for Digital Channels.

| Conn. | Label | Signals |
| :---: | :---: | :---: |
| X1 | Supply | 0 V Power Supply |
|  | 24 Vdc | +24 V Power Supply |
| X2 | C | OP1, OP2 common |
|  | OP1 | SPST NO pole/SSR drive |
|  | OP2 | SPST NO pole/SSR drive |
| X3 | C | OP3, OP4 common |
|  | OP3 | SPST NO pole/SSR drive |
|  | OP4 | SPST NO pole/SSR drive |
| X4 | GND | COM2 - RS485 |
|  | D- |  |
|  | D+ |  |
| $\left\|\begin{array}{c} \mathrm{X} 5 \\ 24 \mathrm{~V} \end{array}\right\|$ | + | For DØ1... Dø8 when D0 |
|  | - | For Dø1... Dø8 when D0 |

| Conn. | Label | Signals |
| :---: | :---: | :---: |
| X9 | mA | A01 Current output |
|  | V | A01 Voltage output |
|  | GND | A01, A02 ground |
|  | V | A02 Voltage output |
|  | mA | A02 Current output |
| X10 | mA | A03 Current output |
|  | V | A03 Voltage output |
|  | GND | A03, A04 ground |
|  | V | A04 Voltage output |
|  | mA | A04 Current output |
| X11 | USB | MicroUSB type port |

X5/X7 - Power supply for Digital Channels

- X5 and X7 connectors ( + and terminals): 24 Vdc Digital Channels Power Supply;
- These 2 power supply terminals are internally connected.

X7 - Digital Inputs Dø9... D16 Connections

- Example of connection when D09... D16 are configured as Digital Inputs;
- Isolation: 800 V between the Digital Inputs and Main electronics;

For proper electrical connection, refer to X5/X7 - Power supply for Digital Channels.

0/4... $20 \mathrm{~mA}, 2$ wires passive Transmitter

TC Inputs

$0 . . .5 \mathrm{Vdc}$ Ratiometric 3 wires

When Al1... Al4 are configured as: TC, NTC, Pt100 or Pt1000, is MANDATORY to short-circuit the terminals $(+,-)$ of the unused channels.

X6 - D01... D08 Digital Outputs Connections

- The Digital Outputs number of the terminals are: D01... D08
The 8 output loads should not exceed 0.7 A each;
- In the drowing are connected only 2 loads as an example;
- Isolation: 800 V between the Digital Outputs and the Main Electronics.

For proper electrical connection, refer to X5/X7 - Power supply for Digital Channels.

- Respect the polarity shown
- Type: 0/4... 20 mA;
- Load: < $500 \Omega$;
- Resolution: 12 bit;
- Accuracy: 0.1\%;
- Isolation: 800 V between the Analogue Ouputs and the Main Electronics.

X9, X10-AO1... AO4 Voltage Analogue Output Connections

0... 10 V Analogue Outputs

Respect the polarity shown;

- Type: 0/4... 20 mA, 0/1... 5 V , 0/2... 10 V ;
- Load: > 1 k ;
- Resolution: 12 bit;
- Accuracy: 0.1\%;

Isolation: 800 V between the Analogue Ouputs and the Main Electronics.

## X7-09... 16 Digital Outputs Connections

- The Digital Outputs number of the terminals are: D09... D16;
- The 8 output loads should not exceed 0.7 A each;
- In the drowing are connected only 2 loads as an example;
- Isolation: 800 V between the Digital Ouputs and the Main Electronics.

For proper electrical connection, refer to X5/X7 - Power supply for Digital Channels.

## Relays:

- Rate: 2 A (for resistive loads);
- Isolation: 3 kV rms beween each channel and Power Supply and between each channel and Main electronics.

## SSR drives:

- Voltage output 0/12 Vdc;
- Respect the polarity shown;
- Output not isolated.

## X4 - COM2 RS485 Serial Communication Port

- RS485 port to connect a fieldbus network using the Modbus protoco (master/slave) or serial ASCII;
- Isolation from Main electronics: always 800 V .
RS485 (COM2) line settings can be configured using the specific DIP switches:

| SW | Description | Default |
| :---: | :--- | :---: |
| $\mathbf{1}$ | $110 \Omega$ line termination | OFF |
| $\mathbf{2}$ | Not used |  |
| $\mathbf{3}$ | Line polarization Pull-Down | OFF |
| $\mathbf{4}$ | Line polarization Pull-Up | OFF |

- $\mu$ USB type AB port (X11) to connect a flash drive (Firmware, system files upload/download or data logging);
- System pushbutton.

The system pushbutton performs different operations accorndingly to the system status but does not restart the CPU or the 1131 application.

Despite the fact that the instrument has been designed to work in an harsh and noisy environment, it is strongly recommended to follow the following suggestions.
All the wiring must comply with the local regulations.
The supply wiring should be routed away from the power cables. Avoid to use electromagnetic contactors, power relays and high power motors nearby.
Avoid power units nearby, especially if controlled in phase angle. Keep the low level sensor input wires away from the power lines and the output cables.
Power lines and output cables must also be at $\mathbf{1 0 0} \mathbf{~ m m}$ (min.) away from the CPU. If this is not achievable, use shielded cables on the sensor inputs, with the shield connected to earth at one side only.

## Warning!

Whenever a failure or a malfunction of the device may cause dangerous situations for persons, things or animals, please remember that the plant must be equipped with additional devices which will guarantee safety.

## How to order

## eP4 = CPU of the Programmable Logic Controller

## A: Display

- = No Display

D = Display (available soon)
B: Optional Digital Outputs
= No Digital Outputs
M $=2$ Relay +2 SSR drive
R $=4$ Relay
$\mathbf{S}=4$ SSR Drive

## C: Analogue Inputs

$5=4$ Universal and Ratiometric AI

## D: Analogue Outputs

- = No Analogue Output

2 = 1 isolated module with 2 not isolated AOs
$4=2$ isolated modules with 2 not isolated AOs each

## E: Digital Channels

-- = No Digital Channels
$88=8$ Inputs +8 Outputs +2 DI Pulse Counters
$16=16$ configurable +2 DI Pulse Counters

F: | Field bus |
| :--- |
|  |
| $\mathbf{E}=$ Ethernet |

G: Communication Ports

- No Communication Ports

1S = COM1
11 = Isolated COM1
2S = COM1 + Isolated COM2
$2 \mathbf{I}=$ Isolated COM1+ Isolated COM2
$4 \mathrm{I}=$ Isolated COM2
