Photoelectrics Amplifier Type S142B..

CARLO GAVAZZI

- µ-Processor controlled
- Amplifier relay for photoelectric switches
- Automatic or manual emitter power regulation
- Self-diagnostic functions
- Alignment help
- Rated operational voltage: 24 VAC/DC, 24 VAC, 115 VAC or 230 VAC
- Output 8 A/250 VAC SPDT relay and 100 mA NPN
- LED indication: Automatic gain, output, level, emitter or receiver fault

Product Description

µ-Processor controlled amplifier for one set of photoelectric sensors, type MOFTR. Utilising an 11-pin circular plug for easy connection.
8 A SPDT relay output, NPN / PNP transistor output or alarm output. Diagnostics for sensor test during operation. Alignment help via LED or alternation of alarm output. Level indication for dirt accumulation. Manual or automatic emitter power regulation. Two emitter codes available for high neighbour immunity. ON- or OFF delay adjustable up to 10 sec.

Specifications

Diagnostic
If a fault occurs on either the emitter or receiver the Alarm LED and output will turn ON.

Emitter fault
During normal operation the receiver is monitored for faults.
If the wires are short-circuited the “Code A, Yellow LED” flashes at a rate of 2 Hz.
If the wires are broken the “Code A, Yellow LED” flashes at a rate of 4 Hz.

Receiver fault
During normal operation the emitter is monitored for faults.
If the wires are short-circuited the “Code B, Green LED” flashes at a rate of 2 Hz.
If the wires are broken the “Code B, Green LED” flashes at a rate of 4 Hz.

Alignment
If the alignment DIP switch is set the Yellow Signal LED Flashes according to the signal quality.
Low frequency means weak signal.
Steady indication means maximum signal. On long distance it is not possible to get a steady signal but the alignment is optimal when the led flashes with the highest frequency.
On short distance the emitter power can be reduced using the potentiometer and then get better readings in the alignment LED.
The ALARM output will follow the Signal LED in alignment mode, so a Sensor tester (optional) can be connected to serve as a remote induction during alignment of the sensors.
NB! In alignment mode the output is off.

Code A or B
When two sensor pairs are mounted close to each other it is recommended to select one set to Code A and the other to Code B to avoid crosstalk.
