minico

Command Switches AR16•DR16, AF16•DF16

- An integrated structure with built-in contacts that can reduce control panel depth.
- A wide variety of sockets are available to simplify wiring.

Operator • Contacts

Mounting panel

Supporting smaller and thinner operator's panels

A structure that integrates operator and contacts to reduce panel-mounting depth. Terminals extending to the rear of the switch ensure easy wiring work.

A wide variety of sockets reduce wiring work

Switches combine with a variety of sockets to simplify wiring.

- Fast-connection socket (Available soon)

- Applicable as a fast-connection terminal switch by combining the socket with a switch.
- Easily wired by simply removing the wire sheath and inserting the wires while pressing the insertion slot button (no soldering required).
- Incorporates a branch terminal for easy branching.

- Connector socket

- Applicable as a connector by combining the socket with receptacles.
- The socket holds the receptacles, making it easy to connect the receptacle to the switch with a single operation.

- Socket for PC board

- Applicable as a switch for PC board by combining the socket with a switch.
- Pattern wiring reduces the number of wiring man-hour and helps prevent faulty wiring.

minico is a nickname for the AR16/AF16 series of integrated command switches with built-in contacts.

AR16 • DR16

AF16 • DF16

Washer

Tightening nut

Fast-Connection socket
(Available soon)

Connector socket

Socket for PC board

Contributes to attractive panel designs

In addition to the standard type, a thin type with a panel protrusion of only 2 mm is available, allowing high-density mounting for attractive panel designs.

Integrated contact structure (Thin type)
AF16/DF16 series

- Keep in mind that the panel cutout size for the thin type depends on the operator shape. See page 44 for details.
- The panel depth is unified to 35.9mm.

Brighter illuminated surface

Less power consumption helps to save energy.
A longer service life helps to reduce maintenance costs.

Dedicated LED lamp

Degree of protection IP65

The operator has IP65 protection for smooth operation without adverse effects from oil, water, or dusts. Applicable to a wide variety of equipment, from machine tools to OA equipment.

Meets EU RoHS requirements

Standard models meet RoHS requirements (EU Directive 2002/95/C).

Standard models meet international standards

Standard models meet UL/CSA requirements, China Compulsory Certification (CCC) standards, and TÜV EN standards, making them ideal for equipment for export.

Note: Command switches shipped as single articles to China must conform to the Product Quality Law. Check with your Fuji Electric representative.

The insertion/extraction life of the key is greatly extended

The key selector switch incorporates a pin tumbler type key (reversible type) to improve the insertion/extraction performance of the key.

- Six key types are available.
- The pin tumbler construction improves security.

The operating angle position of the selector switch can be easily changed.

The bezel is separate from the knob (key), so the operating angle position can be easily changed in 45° increments (with the AR16 series rectangular or square type only).

The following figure shows a knob type example. Same applies to the key type.

•Two-position model example (See page 47 for details.)

Command Switches

AR16, DR16 and AF16, DF16

Safety precautions

- This catalog aims at offering reference information on selecting and purchasing Fuji Electric FA' s electrical devices and components.
- Prior to installation, wiring, operation, maintenance and inspection of the product, read through the Instruction Manuals and/or User's Manuals to ensure proper use of the product. Improper use may result in death or serious injury.
- If you have any question or require further detailed information on this catalog, consult with your local dealership or Fuji Electric FA.
- Observe the following precautions for safe operation of the products contained in the catalog.

WARNING

Power supply must be turned OFF before installation, de-installation, wiring, maintenance and inspection.
Never touch any live parts such as terminals while the power is turned ON.
Electrical shock or short-circuit may result in burn, death, or serious injury.

CAUTION

- Do not transport the products in the method other than those specified. Do not use the products if any damage or deformation is discovered when unpacked. Fire, malfunction or failure may result.
- Do not give the products a shock by falling or toppling during transportation or unpacking. Damage or failure may result.
- Installation, electrical work, electrical wiring, maintenance and inspection should be conducted by qualified personnel with professional knowledge.
- Operate (Store) in the environment specified in the Instruction Manuals and/or User's Manuals. Do not install the products in the abnormal environment such as high temperature, high humidity, dew condensation, dust, corrosive gases, organic solvents, special oil, excessive vibration or shock. Fire, malfunction, electrical shock, or failure may result.
- Use the products at the rated voltage and current specified in the Operating Instructions and/or User's Manuals. Using beyond the rated values may result in grounding, short-circuit, fire, explosion, failure, or malfunction.
- Install the products according to the directions described in the Operating Instructions and/or User' s Manuals. Improper mounting may cause falling, malfunction, or failure, and result in injury.
- Select wire sizes suitable for the applied voltage and thermal current. Tighten with the torque specified in the Operating Instructions. Improper wiring may result in fire.
- Special care should be taken to prevent entry of foreign objects such as dust, concrete chips, iron powder, wire chips, etc. Poor contacts, defective release action, fire, or malfunction may result.
- Periodically make sure the terminal screws and mounting screws are securely tightened. Operation at a loosened status might cause fire or malfunction.
- Attaching the live part protective covers is recommended. Otherwise, it may result in an electric shock to the operator.
- Be sure to install the electrical wiring correctly and securely, observing the operating instructions and manual. Wrong or loose wiring might cause fire, accidents, or failure. Never conduct any repair on-site. Please ask your Fuji Electric FA representative for repair. Fire, accidents, or failure may result.
- Before cleaning, first turn the power OFF, use towels twisted to be dry after soaked with warm water. Use of diluents or other organic solvents may dissolve or discolor the product surface.
- Do not remodel or disassemble the products. Failure may result.
- The products should be treated as industrial wastes when they are to be discarded.
- The products contained in this catalog have been designed and manufactured as general-purpose products for general industry. Customers, who intend to use the products for such equipment or systems that may affect human lives, are requested to prepare safety measures together with other safety devices.
- Customers, who intend to use the products described in this catalog, for special applications such as for nuclear energy control, aerospace, medical, or transportation, please consult your Fuji Electric FA agent.
- Customers, who intend to use the products for such applications or systems that may lead to loss of human lives or serious damage to facility in the event of the products' failure, are requested to provide safety measures by all means.
- The information contained in this catalog is subject to change without prior notice.

Glossary

Classification	Term	Explanation
Rating	Rated insulation voltage (Ui)	A voltage value that serves as a reference when designing a device and satisfies the clearance and creepage distance and the withstand voltage (dielectric strength) of the device.
	Rated operational voltage (Ue)	A voltage value applied to a device under specified conditions. If the device is a control switch, the rated operational voltage (Ue) in combination with the rated operational current determines the equipment that it is to be applied to. Furthermore, the rated operational voltage (Ue) determines the relevant tests and operating load type of the control switch. If the control switch is an illuminated type, the term "lamp operational voltage" is applied in this catalog in order to distinguish it from the rated operational voltage of the switch.
	Rated impulse withstand voltage (Uimp)	This is the peak value of an impulse voltage that has a specified waveform and polarity and that is capable of being withstood by a device under specified test conditions, and serves as a reference for clearance.
	Conventional free air thermal current (Ith)	The maximum value for an electric current used to test the temperature rise of a control switch.
	Rated operational current (Ie)	An electric current applied under specified conditions.
Operating environment	Pollution degree	A factor used for determining the clearance and creepage distance of a device. There are four pollution degrees according to the pollutants in the operating environment, such as the dust in the air. Fuji's Command Switches are applicable to pollution degree 3. Pollution degree 3 refers to the occurrence of conductive pollution or the occurrence of conductivity as a result of condensation, but the occurrence of dry, nonconductive pollution in normal, dry conditions. It applies to environments typical of manufacturing plants.
Degree of protection	IP code	The IP code stipulates the degree of protection of a device provided by its enclosure against the ingress of solid matter and water according to IEC 60529. The IP code is expressed with the code letters IP (Ingress Protection) followed by two digits. The first characteristic digit indicates the degree of protection against the ingress of solid foreign objects. The second characteristic digit indicates the degree of protection against the ingress of water.
Types of pilot lights and illuminated switches	Pilot lights without transformer Illuminated switch without transformer	<p>A pilot light or illuminated switch designed so that the voltage of the electric circuit can be applied directly to the light source.</p> <p>Ex. Pilot light Illuminated switch</p> <p>Note: The terms of a, b, COM, NC and NO indicate the terminal numbers</p>
Operational functions	Momentary	The contacts operate when the pushbutton is pressed and automatically reset when the pushbutton is released.
	Alternate	The contacts operate when the pushbutton is pressed and the actuated state is held (locked) when the pushbutton is released. The contacts are reset when the pushbutton is pressed again.
	Maintained	The knob (key) of selector switch is operated and reset by hand. The contacts are interlocked according to each knob (key) operation.
	Spring return	The knob (key) of the selector switch and the contacts are automatically reset to the normal position if the knob (key) is released while the knob (key) is being actuated.
	Spring/manual return	Manual and automatic knob (key) resetting methods combined and applied to three-notch selector switches.
Others	High-brightness LED lamp	An LED lamp incorporates a four-element LED chip with high luminous efficiency or a high-performance gallium nitride LED chip, providing clear coloring and greatly increased brightness.

Command Switches AR16 and DR16, AR16 and DR16 Features, Contact ratings

■ Features

- An integrated operator component and contact mechanism that reduces control panels' depth. A unified depth of 28.4mm for the Standard type and 35.9mm for the Thin type.
- Thin type and Standard types available for your control panel design. Select an optimum one to match your control panel design.
- A wide variety of sockets help to reduce wiring.
- Incorporating a gold-flashed SPDT or 2PDT contact mechanism with a snap-action structure that makes and breaks 1mA at 5V.
- A key selector switch with a pin tumbler key and reversible-type mechanism provides improved key insertion and removal (extraction) performance.
- Complies with RoHS (EU Directive 2002/95/EC).
- The standard AR16 and DR16, AF16 and DF16 series of the ϕ 16 Command Switches are approved by UL/CSA, CCC and TÜV (EN standard).
- Bearing CE markings.

Shock		Malfunction durability; 100m/s ² Mechanical durability; 500m/s ²		
Operational ambient temperature		–10 to +55°C (no icing or no condensation)		
Storage temperature		–40 to +70°C		
Relative humidity (inside control panel)		45 to 85%RH (–5 to + 40°C) (no icing or no condensation)		
Degree of protection of operating (displaying) section		IP65 (dust-proof, water jet proof): IEC 60529		

■ Degree of protection

- The table below shows the degree of protection stipulated by IEC (International Electrotechnical Commission) standard (IEC 60529).

IP- 6 5

Class	Degree of protection against human contact or penetration by a foreign object	Degree of protection against ingress of water
5	 <ul style="list-style-type: none"> • Normal operation secured even if the dust that can pass through screen of 75μm mesh invades. 	Protection against water jets  <ul style="list-style-type: none"> • Protected against water jet from all directions. • Water projected by nozzle (6.3mm-inner dia.) from all directions at 29.4kPa for 3min at a distance of 3m.
6	 <ul style="list-style-type: none"> • The dust which can pass through screen of 75μm mesh shall not invade. 	Protection against powerful water  <ul style="list-style-type: none"> • Protected against powerful water jet from all directions. • Water projected by nozzle (12.5mm-inner dia.) from all directions at 98kPa for 3min at a distance of 3m.

■ Contact reliability

FUJI has confirmed that the product can be used in 1mA circuit conditions at 5V AC or DC. The operable range, however, may vary depending on the operational ambient conditions and type of load.

■ **Lamp ratings and current consumption**

• **Illuminated pushbutton switch, Pilot lights**

Applied method	Lamp operational voltage	High-brightness LED lamp		
		Type	Lamp rated voltage	Current consumption
without transformer	6V AC/DC	DR6L695-A□	6V AC/DC	Green, Red, Amber, Blue: 7.5mA AC, 7.5mA DC Orange: 8.5mA AC, 8.5mA DC Yellow: 17mA AC, 17mA DC
	12V AC/DC	DR6L695-B□	12V AC/DC	Green, Red, Amber, Blue: 7.5mA AC, 7.5mA DC Orange, Yellow: 8.5mA AC, 8.5mA DC
	24V AC/DC	DR6L695-E□	24V AC/DC	Green, Red, Amber, Blue: 7.5mA AC, 7.5mA DC Orange, Yellow: 8.5mA AC, 8.5mA DC

Note: A box □ indicates the luminous color. For details, see the “Combination of Illuminated pushbutton / pilot light color and LED lamp luminous color”.

■ **Combination of Illuminated pushbutton / pilot light color and LED lamp luminous color**

Illuminated pushbutton / pilot light color (lens color)		Luminous color of high-brightness LED lamp	
	Type		Type
Green	G	Green	DR6L695-■G
Red	R	Red	DR6L695-■R
White	W	Orange	DR6L695-■W
Yellow	Y	Yellow	DR6L695-■Y
Orange	A	Amber	DR6L695-■A
Blue	S	Blue	DR6L695-■S

Note: 1 A box ■ indicates the lamp operational voltage. For details, see the “Lamp ratings and current consumption”.

■ **LED durability**

Type of lamp	Durability	Judgment criterion
LED lamp	Approx. 30000h	When the brightness is less than 50% of initial value.

• **Estimated durability for LED lamps**

Note 1. Durability at Ta=25°C

Note 2. Durability is affected by temperature, humidity, and voltage fluctuation.

■ **Standard models approved by international standards**

The standard models of AR16 and DR16, AF16 and DF16 series of the φ16 Command Switches meet UL / CSA requirements, China Compulsory Certification (CCC) standards, and TÜV EN standards, thus ensuring easier direct or indirect export to North America and European countries with no safety standard concerns.

Command Switches

AR16 and DR16, AR16 and DR16

Panel cutout and mounting

Safety Precautions

Read the Operating Instructions carefully before mounting, wiring, operating, servicing, or inspecting the command switch. Make sure that the Operating Instructions is delivered to the final user of the command switch.

- The safety precautions are classified into two levels, Warning and Caution, with meanings described as follows:

Warning : If operation is incorrect, a dangerous situation may occur, resulting in death or serious injuries.

Caution : If operation is incorrect, a dangerous situation may occur, resulting in minor to medium injuries or physical damage to equipment.

An item described under CAUTION may result in a serious accident, depending on the situation.

Warning

- Do not touch or approach any live part while power is supplied. An electric shock or burning may result.
- Be sure to turn off the power before mounting, dismounting, wiring, or inspecting the product. An electric shock, burning from short-circuiting or equipment malfunction may result.

Caution

- Wire the product according to the wiring instructions in the Operating Instructions. Make sure that the size of the wires is suitable for the voltage and applied current. The wrong wiring may result in fire, accidents or malfunctions.
- Treat the product as industrial waste when it is to be discarded.

Panel cutout, mm

- Standard type (common)

- Thin type (The panel cutout dimension varies depending on the operator or lens shape.)

- Rectangular type

- Square type

- Round type

Installation on panel

- As shown in the figure below, insert the switch main unit into the mounting hole from the front of the panel, attach the washer and tightening nut from the back of the panel, and securely tighten the nut with the wrench (AHX601).

Note: The proper tightening torque is 0.6 to 1.0 N•m.

Note: *1 Do not use pliers or other improper tools to tighten the nut, or tighten it excessively. Otherwise, the nut may be damaged or the switch may malfunction.

Thin type

- As shown in the figure below, insert the switch main unit into the mounting hole from the front of the panel, attach the panel retainer from the back of the panel, and securely tighten the nut with the wrench (AHX601).

Note: The proper tightening torque is 0.6 to 1.0 N•m.

Note: *1 Do not use pliers or other improper tools to tighten the nut, or tighten it excessively. Otherwise, the nut may be damaged or the switch may malfunction.

Applicable panel thickness

Tables 1 and 2 show applicable panel thickness.

Table 1 Standard type (AR16/DR16 series)

Mounting condition		Applicable panel thickness, mm
Without accessories		1 to 6
With accessories	Protective cover	1 to 4
	Dust-tight cover	1 to 4
	Various sockets	1 to 3.2
	Terminal cover	1 to 3.2
	Protective cover + various sockets	1 to 1.6
	Protective cover + Terminal cover	1 to 1.6
	Dust-tight cover + various sockets	Cannot be used.
Dust-tight cover + Terminal cover	Cannot be used.	

Command Switches AR16, DR16 and AF16, DF16 Panel cutout and mounting

Table 2 Thin type (AF16/DF16 series)

Mounting condition		Applicable panel thickness, mm
Without accessories		1 to 6
With accessories	Protective cover	1 to 4
	Various sockets	1 to 3.2
	Terminal cover	1 to 3.2
	Protective cover + various sockets	1 to 3.2
	Protective cover + Terminal cover	1 to 3.2

High-density mounting

Minimum mounting space (pitch) without accessories, mm

• Standard type (AR16/DR16 series)

Illuminated pushbuttons, pushbuttons, selectors, and pilot lights

- ① Rectangular ② Square ③ Round, dome

Note: Determine the mounting pitch by taking the operability and wiring work into consideration.

• Thin type (AF16/DF16 series)

Illuminated pushbuttons, pushbuttons, selectors, and pilot lights

- ① Rectangular ② Square ③ Round, dome

Note: Determine the mounting pitch by taking the operability and wiring work into consideration.

Minimum mounting space (pitch) with accessories, mm

• Protective cover AHX669 and AHX826

(Standard type)

① 43: with the cover fully opened

• Protective cover AHX671

(Standard type)

① 43: with the cover fully opened

• Protective cover AF6D826

(Thin type)

• Protective cover AF6D827

(Thin type)

• Dust-tight cover AHX668

(Standard type)

• Dust-tight cover AHX822

(Standard type)

• Minimum mounting spaces (pitch) with sockets, such as connector socket (AR6S691) and PC board-use socket (AR6S692) are the same as those without accessories.

Note: Determine the mounting pitch by taking the operability and wiring workability into consideration.

Command Switches

AR16, DR16 and AF16, DF16

Notes on use

Safety Precautions

Read the Operating Instructions carefully before mounting, wiring, operating, servicing, or inspecting the command switch. Make sure that the Operating Instructions is delivered to the final user of the command switch.

- The safety precautions are classified into two levels, Warning and Caution, with meanings described as follows:

Warning : If operation is incorrect, a dangerous situation may occur, resulting in death or serious injuries.

Caution : If operation is incorrect, a dangerous situation may occur, resulting in minor to medium injuries or physical damage to equipment.

An item described under CAUTION may result in a serious accident, depending on the situation.

Warning
<ul style="list-style-type: none"> • Do not touch or approach any live part while power is supplied. An electric shock or burning may result. • Be sure to turn off the power before mounting, dismantling, wiring, or inspecting the product. An electric shock, burning from short-circuiting, or equipment malfunction may result.
Caution
<ul style="list-style-type: none"> • Wire the product according to the wiring instructions in the Operating Instructions. Make sure that the size of the wires is suitable for the voltage and applied current. The wrong wiring may result in fire, accidents, or malfunctions. • Treat the product as industrial waste when it is to be discarded.

Method of replacing color lens, legend plate, and screen

Replacing color lens (screen)

- Standard type (AR16/DR16 series)

To remove the color lens, fit the color lens remover (AHX618) to the grooves in the color lens and pull out the lens, or pry the lens lightly with a small slotted screwdriver.

- Thin type (AF16/DF16 Series)

To remove the color lens, pry the lens lightly with a small slotted screwdriver.

If one side of the color lens is separated from the screen, further insert the screwdriver and remove the color lens together with the screen. Do not pry the packing when doing this.

To fit the color lens, align the protrusion of switch main body with the groove of the screen, and press-fit them.

- Removing screen

Insert the tip of a small slotted screwdriver into the groove and press down the screwdriver in the direction of the arrow.

Fitting color lens to screen

• Rectangular type

Set the textured surface side of the legend plate with the screen side, then press-fit the color lens. When press-fitting, make sure that your fingers do not touch the reflective surface inside the screen.

• Square type

Set the textured surface side of the legend plate with the screen side, align the screen protrusion with the color lens groove, and press-fit together. When press-fitting, make sure that your fingers do not touch the reflective surface inside the screen.

• Round type

Align the protrusion of the legend plate with the groove of the screen, also align the screen protrusion and color lens groove, and press-fit together. When press-fitting, make sure that your fingers do not touch the reflective surface inside the screen.

• For alternate action type of illuminated pushbutton switches and pushbutton switches, do not remove the color lenses (screens) in locked (depressed) state. The internal mechanisms may be damaged.

■ Engraving legend plate

Engrave the surface of the legend plate.

- Material: Acrylic resin
- Engraving depth: 0.5 mm max.
- Paint: Use a paint that has alcohol as its main ingredient, such as melamine paint, phthalic acid paint, or acrylic paint.

• Legend plate size

Shape	Size, mm
Rectangular	
Square	
Round	

Notes: ¹ A legend sheet may be used, provided that the external dimensions do not exceed the corresponding outer size specified in the above table and that the thickness is 0.1 mm or below. (No legend sheets are provided with the product. Please prepare on customer side.)
² Do not engrave any part other than the legend plate.

■ Changing the operating angle position of selector switch

The bezel is separated from the knob (key), which makes it easy to change the operating angle position in 45° increments (the AR16 series rectangular or square type only).

The following figures show a knob type example. The key type is the same.

The desired position can be set in 45° intervals.
Set the knob to the desired position, align the groove of the knob, and press-fit the knob.

Command Switches

AR16, DR16 and AF16, DF16

Notes on use

Method of replacing lamp

- To remove the LED lamp, insert the lamp changer (AHX672) in the LED lamp and pull out the LED lamp. To mount the LED lamp, align the lamp terminal side of the main unit with the electrode side of the LED lamp, lightly hold the lamp by hand or with the head of the lamp changer (AHX672), and insert the lamp. The LED lamp has no polarity, so it can be powered by either AC or DC.

Handling of LEDs

LED whose luminous color is green or blue is sensitive to static electricity. Be careful when handling the LED. Take thorough measures against static electricity and surges when handling the product. The following anti-electrostatic measure is recommended. Use a wristband or anti-electrostatic glove when replacing LED lamps.

Wiring

- Wiring to tab terminal
 - Use 110 (2.8mm) series receptacles for tab terminals.
- Pay attention to the following points when soldering.
 - Type of solder: Use resin-core solder.
 - Use a soldering iron with a maximum power consumption of 60W (350(C)) within five seconds. Make sure that the terminal is free of tension during soldering. Also, do not deform the terminal.
- The melting point of lead-free solder is slightly high, which may make soldering difficult. Use a soldering iron that has a large soldering tip or high heat generation.
- Connectable wires
 - Two solid wires with a maximum diameter of 0.8 mm (solder)
 - One stranded wire with a maximum area of 0.75 mm² (solder)
 - Flat-type connection terminal (2.8□-1.25-5) 0.5 to 1.25mm²
 - (2.8□-0.5-5) 0.2 to 0.5mm²
- Use of contact blocks
 - When using NO and NC contacts in the same contact block, avoid connection that involves opposite polarity or wiring from different types of power supply.
- For wiring to adjacent terminals, use the terminal cover (AR6Y261) to prevent short-circuit, or an insulation tube to assure isolation. For solder terminals, caution is required if thick wires, in particular, are connected or a large quantity of solder is used.

Terminal arrangement

Model	Circuit diagram (example)	Terminal arrangement (view from the terminal (back) side)
Illuminated pushbuttons (2PDT)		<p>[TOP] (▼) Display side</p> <p>Left-side contact Right-side contact</p>
Pushbuttons and selector switches (2PDT)		
Pilot lights		<p>[TOP] (▼) Display side</p>

Note: Only the left-side contact is applicable to the SPDT mechanism.

■ LED Lamps

- LED lamp malfunctioning (incorrect lighting)
The LED lamp incorporates a circuit to prevent malfunctioning. Compared with conventional models, this LED lamp is less likely to malfunction, but it incorporates no absolute countermeasures.
A minute current (approximately 0.25 mA) turns on the LED lamp. A leakage current from the surge absorption circuit or noncontact circuit, or stray capacitance between cables, may also turn on the LED lamp.
In this case, a countermeasure (e.g., attaching a resistor in parallel with the LED lamp) is required.
- Countermeasure against malfunctioning
Malfunctioning can be prevented by connecting a shunt resistor (R) in parallel. The resistance in that case varies with the model and operating conditions.

- The permissible fluctuation range for the operating voltage of the 6V model is $\pm 5\%$ and that for the 12V or 24V model is $\pm 10\%$. If the operating voltage is always 5% or 10% higher, select a resistor that will make the operating current the same as or lower than the rated current, and connect the resistor in series to the LED lamp.
- Calculation of external resistance
Example: Connecting a 24V red LED to a 48V circuit
External resistance $[\Omega] = \frac{\text{Circuit voltage [V]} - \text{Rated voltage [V]}}{\text{Rated current [A]}}$
 $= \frac{48-24}{7.5 \times 10^{-3}} = 3200 [\Omega]$
→ Therefore, use an external resistor of 3.3kΩ 1W.
(Select a resistor with sufficient wattage.)
- Surges
High-brightness LED products use elements that are sensitive to static electricity. Keep in mind that an unusual voltage, such as a surge voltage, may cause the product to malfunction.

■ Selector Switches

- **Knob type**
The knob can be operated by turning it lightly. Be careful to operate the knob with a torque not exceeding 1N•m.
- **Key type**
Types of keys
Five types (B, C, D, E, and F) are available in addition to the standard type (type A).
Make sure that the symbol on the key coincides with the symbol on the switch.

- Fully insert the key into the switch and turn the key. Do not pull on the key while turning it.
- Operate the key with a torque not exceeding 0.1N•m.
- Do not forcibly insert or extract the key.
- Do not attempt to operate the switch with the key insufficiently inserted or insert the wrong key. Otherwise, a malfunction may result.

Command Switches

AR16, DR16 and AF16, DF16

Notes on use

■ Connector sockets

- Connectable wires
Stranded wire: 0.3 to 0.75 mm² (AWG22 to AWG18)
- Arrange for a receptacle terminal separately.
Nichifu Co., Ltd.: CMC62895F
- Check the insertion position and insert the receptacle terminal into the socket after connecting the wires to the receptacle terminal. (The wires once connected cannot be disconnected.) Lightly pull the wires and check that the receptacle terminal is securely connected to the socket.

- Align the ▲ mark of the socket and the TOP (▼) mark of the switch, and put the socket and switch together.

■ Socket for PC board

- Minimum mounting space (pitch), mm

Obtain the mounting pitch based on a reference line to minimize the cumulative error.
Make sure that the centering difference between the switch and the PCB socket does not exceed 0.25 mm.

- Apply the following panel cutout dimensions (in mm) to stabilize the operator position of the switch when combined with the socket.

AR16/DR16 (common)

AF16/DF16 (round type)

- Mount the switch to the panel. Make sure that the switch is free of any bends.

- PC board processing dimensions (in mm) as viewed from the socket mounting side.

- The reference is the center of the socket (switch).
- Switch terminal arrangement (as viewed from the socket mounting side)

Note: The right-side contact is connected in the case of an SPDT contact.

- Insert the socket so that the lever will be located in the 5mm-diameter through hole of the PC board. Set the lever to the lock position as viewed from the socket mounting side.

- Combine the switch-mounted panel with the socket on the PC board, and solder the socket terminal.

- Combine the PCB socket and the panel while making sure that the socket terminal does not fall off, and turn over the socket to do the soldering. Do not leave any space between the PC board and socket.
- After combining them, check that the lever as viewed from the soldering side is in the lock position, and solder the terminal.

- Pay attention to the following points when soldering.
 - Type of solder: Use resin-core solder.
 - Finish soldering at 350°C within 5 seconds.
 - Do not wash the socket.
 - Solder the socket so that no flux adheres to it.
- The melting point of lead-free solder is slightly higher than lead solder, which may make soldering difficult. Use a soldering iron with a large tip or that provides a high heat generation.
- Using a spacer between the panel and the PC board
 Make sure that the distance shown in the figure below is maintained between the panel and the PC board. The spacer dimensions vary with the thickness of the mounting panel.

Series	A (mm)
AR16/DR16	30.2±0.2
AF16/DF16	37.7±0.2

- Mounting and removing PC board sockets
 - Removing
 Push down the socket levers all the way viewed from the soldering side in the direction of the free position and remove the PC board sockets. After removal, the socket levers will return to the lock position automatically.
 - Mounting
 Check that the socket lever as viewed from the soldering side is in the lock position, lightly insert the terminal and socket so their position is aligned with the switch on the panel, press the socket-mounting portion of the PC board, and securely insert the entire socket until the socket lever snaps. (Check that the lever as viewed from the soldering side is in the lock position.)
- Use the switch within the following rated voltage range when the PCB socket is used.
 - Rated insulation voltage: 60V
 - Rated operational voltage: 24V
- Use a 1.6-mm-thick double-sided through-hole printed circuit board made of copper-plated laminated epoxy resin on a woven glass fabric base.
- In case of standard type (AR16 and DR16 series), beware that the adopted models are not allowed to attach the protective cover to some models and that the adopted models cannot be mounted to some models afterward.

■ **Others**

- Operation
 - Do not hit or flip the button, or the button may be damaged.
 - Be sure to operate the button by hand.
 - Do not pull the button if the switch is an alternate action type.
- High-density mounting of illuminated type
 - When continuously lighting pilot lights or pressing illuminated pushbuttons, keep in mind that the ambient temperature may exceed the rated value due to the heat radiated by the lamp.
 - Be sure to ventilate the lamp /switch if the mounting panel is not made of metal or if the mounting panel is an enclosed type.
- Usage locations
 - Be sure to use and store the product within the rated ambient temperature and humidity ranges.
 - Although the product resists ordinary cutting oils and coolant oils, do not use the unit in places where special oils may be sprayed onto the product.
 - If dusts or filings accumulate in the gap between the button and the frame, the switch may fail to operate normally. Take appropriate measures, such as using a dust-proof protective cover, if the switch is to be used in places that are subject to dusts or filings.
 - The AR16/DR16 series and AF16/DF16 series are for indoor use. Make sure that the product is not exposed to direct sunlight.
 - Do not use the product in the places that are subject to the adverse effects of ozone or corrosive gases.

Safety Considerations

- For safe operation, read the instruction manual or user manual that comes with the product carefully or consult the Fuji sales representative from whom you purchased the product, before using the products.
- Products introduced in this catalog have not been designed or manufactured for such applications in a system or equipment that will affect human bodies or lives.
- Customers, who want to use the products introduced in this catalog for special systems or devices such as for atomic-energy control, aerospace use, medical use, passenger vehicle, and traffic control, are requested to consult the Fuji sales division.
- Customers are requested to prepare safety measures when they apply the products introduced in this catalog to such systems or facilities that will affect human lives or cause severe damage to property if the products become faulty.
- For safe operation, wiring should be conducted only by qualified engineers who have sufficient technical knowledge about electrical work or wiring.
