

# Pre-production and sample electric vehicle power fuses — 500 Vdc, 50-400 A

## Fuse size/ratings

- 20 mm diameter, 50-150 A
- 25 mm diameter, 100-250 A
- 30 mm diameter, 200-400 A

## Description

Eaton's Bussmann™ series Electric Vehicle (EV) fuses for protecting high power battery charging and management systems up to 500 Vdc in ratings from 50 to 400 amps.

## Specifications:

### Ratings

- Volts - 500 Vdc
- Amps – 50-400 A
- Interrupting rating
  - Max DC – 20 kA
  - Min DC 200%

## Agency information

- Designed to:
  - JASO D622
  - ISO 8820-8
- Manufactured under a IATF 16949 quality system for compliance with automotive requirements
- RoHS compliant
- REACH declaration available upon request

## Features

- Higher voltage rating provides overall system efficiency using smaller, more economical conductors while meeting the needs of higher voltage battery packs
- Higher interrupting rating protects high capacity battery packs needed for vehicle acceleration and range requirements
- Up to ten times faster opening under high fault current conditions helps assure reliable protection of circuits and components
- Requires up to 48% less space than conventional high speed fuses to help reduce space and weight
- Data logging system marks each fuse with a serial number and date code for traceability of Critical to Quality characteristics
- To help project the life of the fuse in your application, unique driving profiles and conditions can be simulated to verify proper fuse size and performance under a wide range of driving behaviors
- Operation as low as 200% overload provides back up protection to the battery management system
- Can be applied in parallel to realize greater ampacity within sizing guidelines

Powering Business Worldwide

**Fuse ratings**

Amps	Average @ 20 kA/500 Vdc*		Power loss (W) @ 50%**
	Melting I <sup>2</sup> t	Clearing I <sup>2</sup> t	
<b>20 mm diameter case</b>			
50	368	746	1.19

For information on production fuses, contact your local Bussmann product sales representative.

**20 mm diameter DC minimum melt / maximum clearing time-current curves — multiple of rated current**

For 50 to 100 amp fuses supplied via DC rectifier @ 500 Vdc and time constant (L/R) 2 ms ± 0.5 ms

**20 mm diameter DC minimum melt / maximum clearing time-current curves — multiple of rated current**

For 125 to 150 amp fuses supplied via DC rectifier @ 500 Vdc and time constant (L/R) 2 ms ± 0.5 ms

**25 mm diameter DC minimum melt / maximum clearing time-current curves – multiple of rated current**

For 100 to 150 amp fuses supplied via DC rectifier @ 500 Vdc and time constant (L/R) 2 ms ± 0.5 ms

**25 mm diameter DC minimum melt / maximum clearing time-current curves – multiple of rated current**

For 175 to 250 amp fuses supplied via DC rectifier @ 500 Vdc and time constant (L/R) 2 ms ± 0.5 ms

**30 mm diameter DC minimum melt / maximum clearing time-current curves – multiple of rated current**

For 200 to 400 amp fuses supplied via DC rectifier @ 500 Vdc and time constant (L/R) 2 ms ± 0.5 ms

**Power loss correction factors**

**Melting time correction factors (tolerance band)\***

\* Average at 250 percent of rated current.

Clearing  $I^2t$  correction factors – 5 to 10 kA and 20 kA

\* Correction factor applies to  $I^2t$  clearing at 20 kA in the catalog number table on page 2.
