ALL-WEATHER INSTANT CONNECTION

ENTRELEC Electrical Solutions: Now's the time to try our new waterproof instant connectors!

Resistant to dust, temperature fluctuations and full immersion in water for 2 hours at 1m, ENTRELEC IPX8 Instant Connectors are a clear choice for your next application.

Our IPX8 Connectors save installation time with ENTRELEC's Insulation Displacement Connection technology, which enables an instant connection with no need to prepare the wire. Simply pick a connector and crimp the wire by pushing the button using a standard set of pliers until it 'clicks'. Once the connection is made, the internal sealing gel protects the assembly from the environment. A clear body design allows you to easily check the connection. ENTRELEC's IPX8 connector accommodates wires from 18 to 12 AWG – 0.75 to 4 mm² – using the universal red, blue, yellow color coding. The modular design of the connectors offers the possibility to stack them together and create custom configurations.

The ENTRELEC IPX8 Instant Connectors are the fastest, easiest and most convenient wire connectors for Indoor and outdoor installations.
