## Super Mist Separator

 Series AME㽞
#### Abstract

Series AME separates and absorbs aerosol state fine oil particles in compressed air and changes the oil lubricating compressed air to oilless equivalent air. It should be applied for filtration of compressed air requiring high cleanliness for coating lines, compressed air for clean rooms and compressed air for equipment necessary to avoid oils.

Due to its special configuration, series AME indicates the life of the filter element by a color change. Accordingly, the replacing time can be judged visually. (A red color spot indicates the replacing time.)

By all means series "AM" should be used as a prefilter. Additionally the series "AMF" in the rear stage can produce a high quality compressed air as air source for clean room.

Model

| Model | AME150 | AME250 | AME350 | AME450 | AME550 | AME650 | AME850 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Rated flow (elmin (ANR)) | 200 | 500 | 1000 | 2000 | 3500 | 6000 | 12000 |
| Port size <br> (Nominal size B) | $1 / 8,1 / 4,3 / 8$ | $1 / 4,3 / 8,1 / 2$ | $3 / 8,1 / 2,3 / 4$ | $1 / 2,3 / 4,1$ | $3 / 4,1$ | $1,11 / 2$ | $11 / 2,2$ |
| Weight (kg) | 0.38 | 0.55 | 0.9 | 1.4 | 2.1 | 4.2 | 10.5 |

Note 1) Max. flow capacity at a pressure of 0.7 MPa . It varies depending on operating pressure. Refer to "Flow Characteristics" p.4.6-23 and figure of "Max. air flow" p.4.6-23.

Specifications

| Fluid | Compressed air |
| :--- | :---: |
| Max. operating pressure | 1.0 MPa |
| Min. operating pressure | 0.05 MPa |
| Proof pressure | 1.5 MPa |
| Ambient and fluid temperature | 5 to $60^{\circ} \mathrm{C}$ |
| Filtration | $0.01 \mu \mathrm{~m}(95 \%$ particle size collection ) |
| Oil mist removal rate | Less than 3.5 particles $0.3 \mu \mathrm{~m}$ or larger per liter of air <br> ( 100 particles or less per cubic foot) |
| Element life | Element Color Indicator (When element becomes saturated <br> with oil the element surface changes from white to red.) |

Accessories (Options)

| Applicable models | AME150 | AME250 | AME350 | AME450 | AME550 | AME650 | AME850 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Bracket assembly <br> $\binom{$ With cap bolt, }{ spring washer } | BM51 | BM52 | BM53 | BM54 | BM55 | BM56 | BM57 |

## How to Order

## Series AME

Flow Characteristics

AME250

## How to Select

Select the model in accordance with the following procedure taking the inlet pressure and max.air flow into consideration.
(Example) Inlet pressure: 0.6 MPa
Max.air flow capacity: $5 \mathrm{~m}^{3} / \mathrm{min}$.(ANR)
(1) Select the point of contact $A$ of inlet pressure and max.air capacity in the graph.
(2) Select the type whose max.air flow capacity is over that point; AME650.

Note: Make sure to select a model that has the maximum flow rate line above the obtained intersecting point. With a model that has the maximum flow rate line below the obtained intersecting point, the flow rate will be exceeded, thus leading to a problem such as being unable to satisfy the specifications.

# Super Mist Separator Series AME 

Construction

* With gasket and O ring

## Precautions

IBe sure to read before handling. Refer to p. $0-26$ and $0-27$ for Safety Instructions and common precautions on the Iproducts mentioned in this catalog, and refer to p.4.0-5 to 4.0-7 for more detailed precautions of every series.

## Design

## $\triangle$ Caution

(1) Do not use this product in a line in which the pressure pulsation cycle is frequent. If it must be used under such conditions due to unavoidable circumstances, contact SMC beforehand.
(2) Do not use it with anything other than dry air (such as air containing moisture). If it is used with anything other than dry air (such as air containing moisture), the drainage will flow in, and the color change indicator function will not operate properly.
(3) Make sure to install a mist separator (AM Series), a micromist separator (AMD Series), or a micromist separator with a prefilter (AMH Series) on the primary side.
(4) The bracket that is provided with the product is for supporting the product itself. Thus, it cannot support the piping or other items that are connected. If these items need to be supported, provide an additional support.

## Mounting

## $\triangle$ Caution

(1) Verify the direction of the flow of the compressed air and the " $\triangleright$ " mark that indicates the inlet of the product before connecting. It cannot be used if connected in the opposite direction.

(2) Make sure to install this product on horizontal piping. If it is installed diagonally, laterally, or upside down, the drainage that is separated by the element will splash to the secondary side.

## Maintenance

## $\triangle$ Caution

(1) If red spots appear on the element surface, it is time to replace the element. Immediately replace it with a new element. Make sure to replace the O ring and the gasket together with the element. The element can be seen through the sight glass in front of the mist separator body. Make sure to inspect it at least once a day, and pay particular attention to the replacement interval of the element. Also, it is recommended to install a check filter just in case the red spots on the element surface are overlooked. (Example: install an additional AME, thus placing two of them inline.)
(2) Even if the red spots do not appear on the element surface, the replacement interval for the element is when the pressure drop reaches 0.1 MPa or after 2 years of operation, whichever comes first.
(3) If the element continues to be used past its replacement interval, the element could become damaged. If the element continues to be used after the red spots have appeared on its surface, the red-dyed oil mist will splash to the secondary side.
