Timed Under Voltage Relay (Delayed Restart)

Protection to IP20

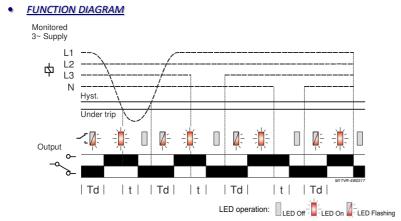

43880

Red LED flashes during restart delay period (Td) confirming power is present and all phases are above the 75% trip level

- Meets DEWA regulations (Section 8.2)* \Box
- Temperature rating up to +60°C
- Monitors own supply and detects an Under voltage condition on one or more phases
- **Detects phase loss and neutral loss**
- Fixed Under voltage trip level (75% of Un)
- Adjustable Time delay (5 10m)
- SPDT relay output 6A
- Red LED also used for relay status
- Compact 17.5mm DIN rail housing

INSTALLATION AND SETTING

BEFORE INSTALLATION, ISOLATE THE SUPPLY.

Installation work must be carried out by qualified personnel.

Connect the unit as required. The Connection Diagram below shows a typical installation, whereby the supply to a load is being monitored by the unit. If a fault should occur (i.e. fuse blowing), the relay will de-energise and assuming control of the external Contactor, de-energise the Contactor as well

Applying power.

- Apply power and assuming all phases and neutral are present, the phase voltages are above the fixed trip level (plus hysteresis) the delay period (Td) will commence. The relay will remain de-energised and red LED 1 flash during this period.
- After the set delay has elapsed, the relay will energise red LED will remain on.

Setting the unit

Set the "Delay (Td)" 2 adjustment as required.

The table below shows the status of the unit during a particular condition
