Applications

The range of applications of the S800 and S500 high performance circuit breakers is extremely varied: from building and marine installations, industry, transport and renewable energies to uninterrupted power supply. The S800 and S500 high performance circuit breakers are reliable switches: rated ultimate short-circuit breaking capacity up to 50 kA, adjustable or fixed rated tripping current, current rating up to 125 A, the most varied of characteristics and much more.
S800 and S500 are flexible, yet at the same time meet the highest safety requirements. See the variety for yourself!

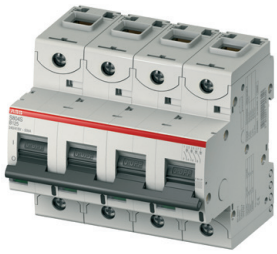
Highlights



High Performance
Circuit Breaker S800S
for IEC and UL applications

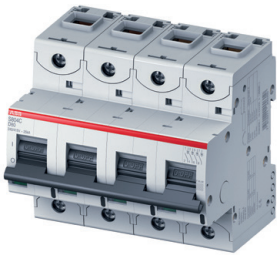
+ Benefits
- Suitable for both IEC and UL applications
- Compact, space-saving design thanks to only 27 mm pole width
- Wide range of international standards supported

Features
- Rated operational voltage up to 690V AC (IEC) and 346/600V AC (UL), supplementary protector
- Rated short-circuit breaking capacity (I_{cu}) 50kA 240/415V AC (IEC) and 30kA @ 240V AC (UL)
- Useable with short-circuit current limiter S803SSCL to increase breaking capacity up to 100kA
- Fast modification on ring I_{ug} terminals

S800S is designed for use in both IEC and UL applications and available in 1-, 2-, 3- and 4-pole versions.

The current range covers nominal rated currents from 6A up to 125A (depending on characteristic) with a maximum rated short circuit breaking capacity ($I_{cu)}$ of up to 50kA in IEC applications and breaking capacities (Icc) of up to 30 kA in UL applications.

The range of applications includes transformer and motor protection, mining industry and power distribution systems. Furthermore, S800S can be used in lighting systems and ventilation equipment protection as well as applications supplied by long wires.



High Performance
Circuit Breaker S800C
for IEC and UL applications

+ Benefits
- Suitable for both IEC and UL applications
- Compact, space-saving design thanks to only 27 mm pole width
- Wide range of international standards supported

Features
- Rated operational voltage up to
- 440V AC (IEC) and 277/480V AC (UL), supplementary protector
- Rated short-circuit breaking capacity (I_{cu}) 25kA @ 240/415V AC (IEC) and 20kA @ 240V AC (UL)
- Fast modification on ring I_{ug} terminals

S800C is designed for use in IEC and UL applications and available in 1-, 2-, 3- and 4-pole versions.

The current range covers nominal rated currents from 10A up to 125A (depending on characteristic) with a maximum rated short circuit breaking capacity (I_{cu}) of up to 25kA in IEC applications and breaking capacities (I_{cc}) of up to 20kA in UL applications.

The range of applications includes transformer and motor protection, mining industry and power distribution systems. Furthermore, S800S can be used in lighting systems and ventilation equipment protection as well as applications supplied by long wires.

High Performance
Circuit Breaker S800HV
for 1000V AC applications

+ Benefits
- Suitable for both IEC and UL applications
- Compact, space-saving design
- Specifically designed for industrial applications

Features
- Rated operational voltage of 580/1000V AC (IEC) and 600V AC (UL), supplementary protector
- Rated short-circuit breaking capacity (I_{cu}) of 4 kA at 580/1000V AC and 15kA @ 600V AC (UL) (only valid with XT2L 125 TMF 35-400)
- Fast modification on ring I_{ug} terminal is possible

S800HV is designed for voltages of 580/1000V AC and is available as 1-, 2- and 3-pole version.

The current range covers the rated operational current range from 6 - 125A with a max. rated short-circuit breaking capacity (I_{cu}) of 4kA.

Thanks to the high rated operational voltage of 580/1000V AC S800HV can be used in a variety of applications – from underground mining to distributions on high altitudes, e.g. transformer and motor protection, mining industry, power disitribution systems, lighting systems and ventilation equipement protection as well as applications supplied by long wires.

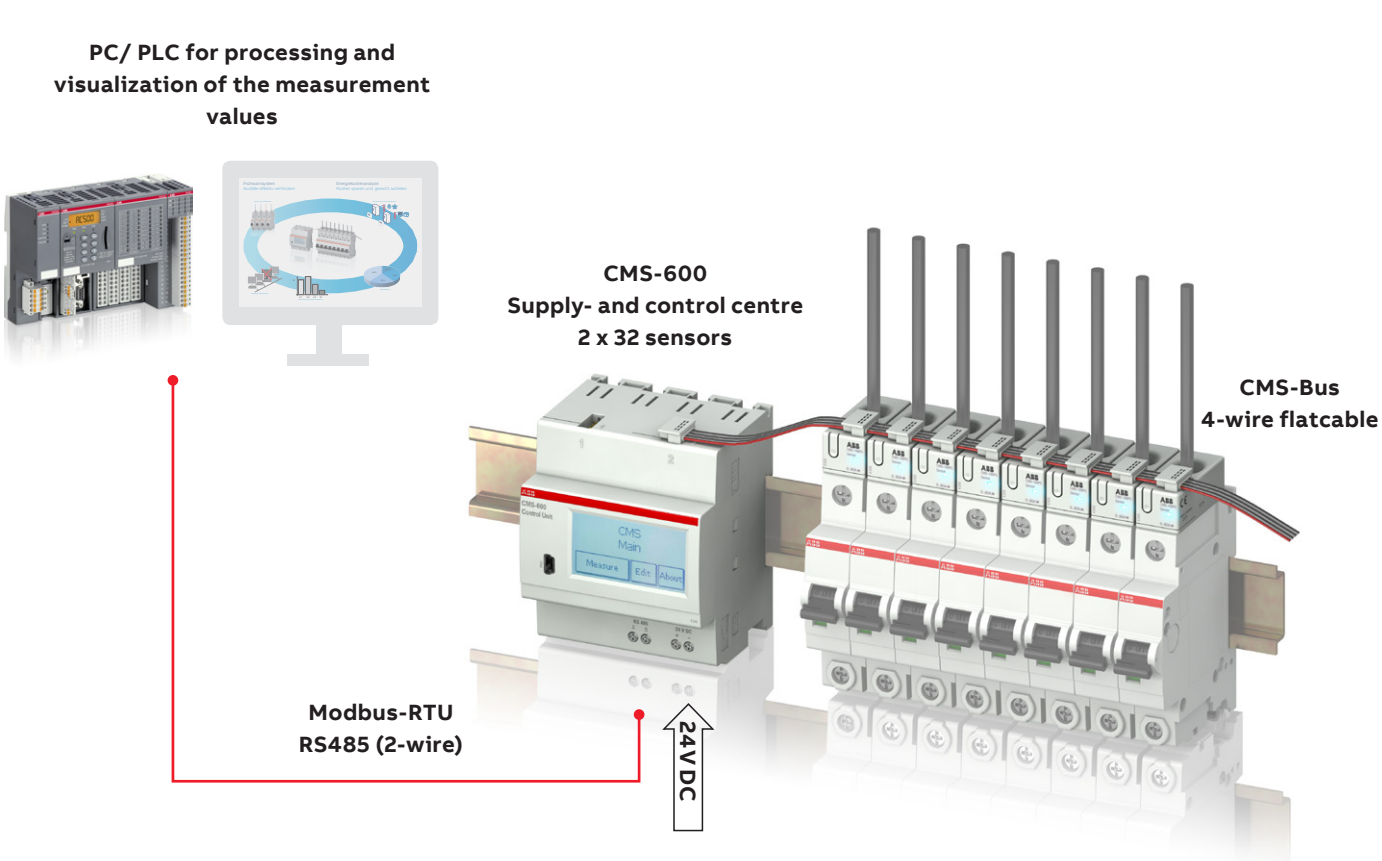
NEW PRODUCTS

CMS (Current Measurement Sensor) for S800

Simple and flexible assembling
The CMS is a multichannel current measurement system for branch monitoring of alternating (AC) and direct (DC) currents up to 160 A. Various sensor types allow the mounting in every installation environment.

Advantages
- A sensor for all types of current
- Minimal space requirements
- Simple installation
- Always retrofitted and expanded

Overview



NEW PRODUCTS

Pole connector S802-LINK

Circuit breakers used to protect photovoltaic equipment are exposed to high ambient temperatures during operation and they have to withstand high temperatures up to 50 °C or more. When a circuit breaker with rated current of 125 A is used, roughly 50 % of heat generated by the current is dispersed through the conductors or wires which are connected via the terminals to the breaker as well as the incoming and outgoing.

If the incoming conductors or wires, which are located in the upper part of the circuit breaker, are eliminated and replaced by a short wire, in form of an electrical bridge, there is no possibility to take out the heat generated in the circuit breaker and this can result in overheating of the breaker. Due to the high ambient temperatures, the excessive amount of heat generated in circuit breakers can lead to a considerable increase in the combiner's box temperature and this can lead to malfunction i.e. early tripping of the MCB or even overheating the MCB.

The link connector is an evolutionary form of electric connector, which is capable to dissipate the heat generated, and improves significantly the thermal conditions of the application. The pole connector dissipates the heat by natural convection, and because of its dielectric strength it is safe even if it is touched.

Advantages of the pole connector

- Avoid hazardous situation due to high temperatures in demanding applications
- Avoid early tripping of the MCB
- Reduce heat dissipation of the MCBs in the box with significant temperature reduction
- Small dimensions fit in every box
- Rated current range of 50 A and 125 A used in 2-pole and 4-pole-breakers
- Avoid isolation damage by excessive bent of the cable (not following cable manufacturer limits)

Properties of main devices S800

High Performance MCB S800

Characteristics of the S and N series

Characteristics

B

Tripping characteristic B
Thermal tripping 1.13 ...1.3 x I_n
Electromagnetic tripping
3 ... 5 x I_n AC
Reference temperature 30°C

As circuit breaker for electric circuits feeding consumers that do not generate any current peaks, or only mild ones (boilers, electric heaters, cooking stoves).

C

Tripping characteristic C
Thermal tripping 1.13 ...1.3 x I_n
Electromagnetic tripping
5 ...10 x I_n AC
Reference temperature 30°C

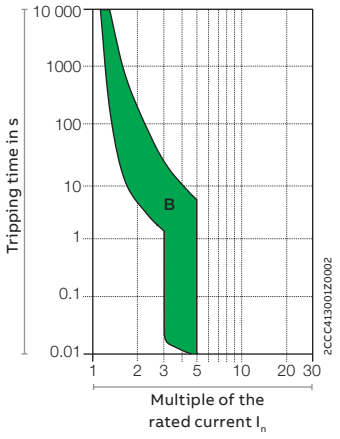
As "standard" MCB for electric circuits feeding consumers that generate current peaks normal within inductive devices (fluorescent tubes, electric discharge lamps) as well as for circuits within sockets in commercially used systems/ plants.

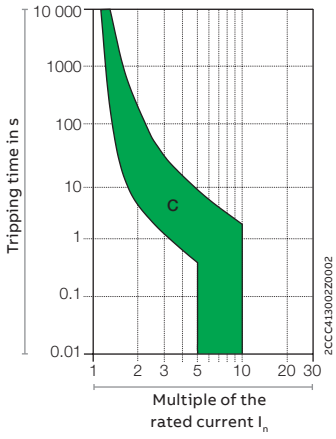
D

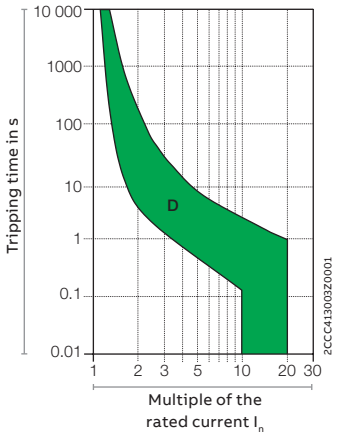
Tripping characteristic D
Thermal tripping 1.13 ...1.3 x I_n
Electromagnetic tripping
10 ... 20 x I_n AC
Reference temperature 30°C

As main circuit breaker for electric circuits feeding consumers that generate extremely high current peaks (transformers, capacitor banks).
As main circuit breaker connected upstream of other circuit breakers (reference overcurrent circuit breaker).

Tripping characteristics







Tripping behaviour compliant to EN 60898-1

		Thermal tripping		Electromagnetic tripping	
Characteristic	**Currents**	**Small test current**	**Large test current**	**Small test current**	**Large test current**
B	10 ... 80 A	1.13 x I_n	1.45 x I_n	3 x I_n	5 x I_n
C	10 ... 80 A	1.13 x I_n	1.45 x I_n	5 x I_n	10 x I_n
D	10 ... 80 A	1.13 x I_n	1.45 x I_n	10 x I_n	20 x I_n

* applies exclusively to the S series.

Characteristics

K

Tripping characteristic K
Thermal tripping 1.05 ...1.2 x I_n
Electromagnetic tripping
13 x I_n AC
Reference temperature 40°C

Serves as High Performance MCB in case of high magnetic inrush currents that occur, e.g. in engines or transformers. This characteristic provides the best protection for a wide range of electrical
systems by allowing high inrush currents when starting up the system.

UCB

Tripping characteristic UCB
Thermal tripping 1.05 ...1.3 x I_n
Electromagnetic tripping
6 x I_n DC
Reference temperature 30°C

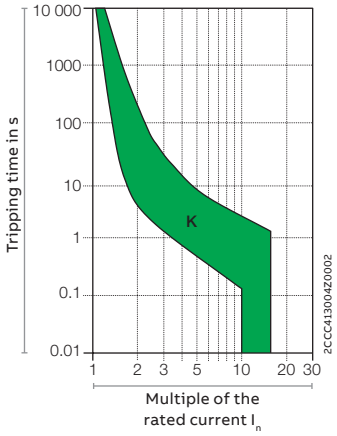
Device protection independent of polarity within DC plants up to 750 V =
at a time constant of ≤15 ms.

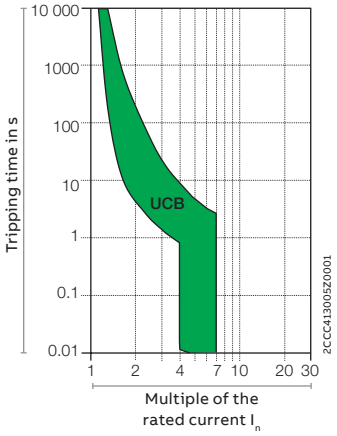
UCK

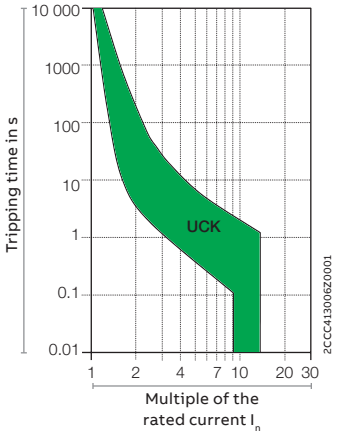
Tripping characteristic UCK
Thermal tripping 1.05 ...1.2 x I_n
Electromagnetic tripping
11 x I_n DC
Reference temperature 40°C

Device protection independent of polarity within DC plants up to 750 V =
at a time constant of ≤15 ms.

Tripping characteristics







Tripping behaviour compliant to IEC 60947-2

		Thermal tripping		Electromagnetic tripping
Characteristic	**Currents**	**Small test current**	**Large test current**

UCK*	10 ... 80 A	1.05 x I_n	1.20 x I_n	11 x I_n ± 20% (DC)

High Performance MCB S800

Characteristics of the B and C series

Characteristics

B

Tripping characteristic B
Thermal tripping 1.13 ...1.3 x I_n
Electromagnetic tripping
3 ... 5 x I_n AC
Reference temperature 30°C

As circuit breaker for electric circuits feeding consumers that do not generate any current peaks, or only mild ones (boilers, electric heaters, cooking stoves).

C

Tripping characteristic C
Thermal tripping 1.13 ...1.3 x I_n
Electromagnetic tripping
5 ...10 x I_n AC
Reference temperature 30°C

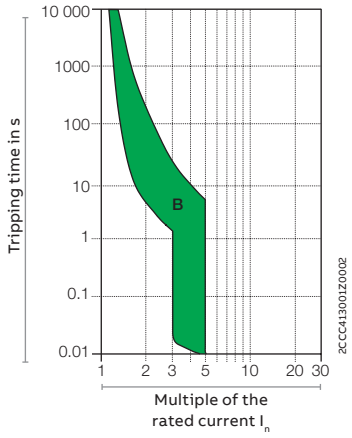
As "standard" MCB for electric circuits feeding consumers that generate current peaks normal within inductive devices (fluorescent tubes, electric discharge lamps) as well as for circuits within sockets in commercially used systems/plants.

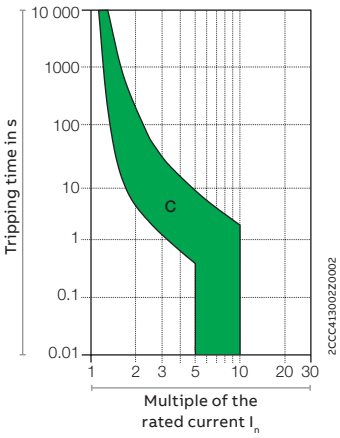
D

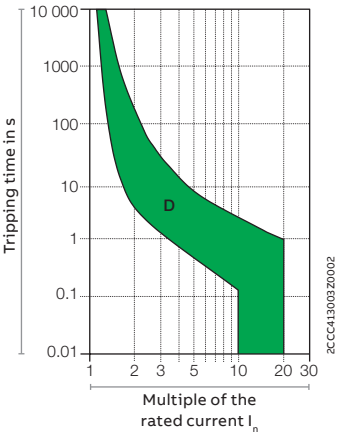
Tripping characteristic D
Thermal tripping 1.13 ...1.3 x I_n
Electromagnetic tripping
10 ... 20 x I_n AC
Reference temperature 30°C

As main circuit breaker for electric circuits feeding consumers that generate extremely high current peaks (transformers, capacitor banks).
As main circuit breaker connected upstream of other circuit breakers (reference overcurrent circuit breaker).

Tripping characteristics







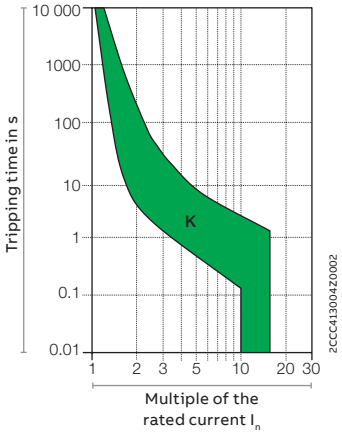
Tripping behaviour compliant to 60898-1 (apply for S800C only)

		Thermal tripping		Electromagnetic tripping	
Characteristic	**Currents**	**Small test current**	**Large test current**	**Small test current**	**Large test current**
B	10 ... 125 A	1.13 x I_n	1.45 x I_n	3 x I_n	5 x I_n
C	10 ... 125 A	1.13 x I_n	1.45 x I_n	5 x I_n	10 x I_n
D	10 ... 100 A	1.13 x I_n	1.45 x I_n	10 x I_n	20 x I_n

K

Tripping characteristic K
Thermal tripping 1.05 ...1.2 x I_n
Electromagnetic tripping
13 x I_n AC
Reference temperature 40°C

Serves as High Performance MCB in case of high magnetic inrush currents that occur, e.g. in engines or transformers. This characteristic provides the best protection for a wide range of electrical systems by allowing high inrush currents when starting up the system.



Tripping behaviour compliant to IEC 60947-2

Characteristic	**Currents**	**Small test current**	**Large test current**	
B	10/32* ... 125 A	1.05 x I_n	1.30 x I_n	4 x I_n ± 20%
C	10/32* ... 125 A	1.05 x I_n	1.30 x I_n	8 x I_n ± 20%
D	10/32* ... 125 A	1.05 x I_n	1.30 x I_n	13 x I_n ± 20%
K	10/32* ... 125 A	1.05 x I_n	1.20 x I_n	13 x I_n ± 20%

* applies for S800B

High Performance MCB S800

Characteristics of U series

Characteristics

Z

2CCC413315F0001

Tripping characteristic Z
Thermal tripping 1.00 ... 1.35 x I_n
Electromagnetic tripping
4 x I_n AC
Reference temperature 25°C

As miniature circuit breaker for electric circuits feeding consumers that do not generate any current peaks, or only mild ones.

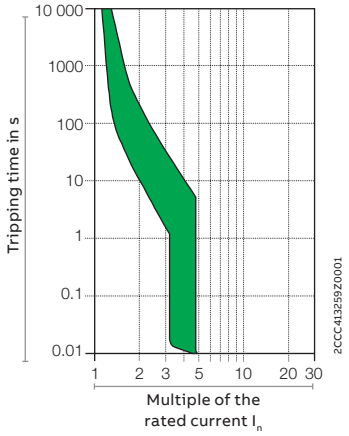
K

2CCC413304F0002

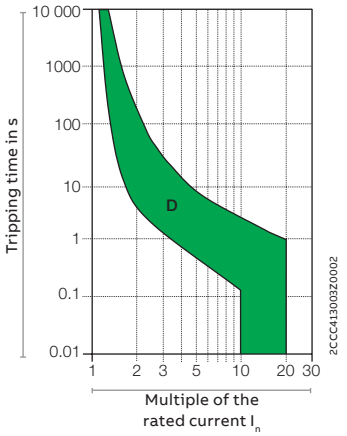
Tripping characteristic K
Thermal tripping 1.00 ... 1.35 x I_n
Electromagnetic tripping
13 x I_n AC
Reference temperature 25°C

Serves as High Performance MCB in case of high magnetic inrush currents that occur, e.g. in engines or transformers. This characteristic provides the best protection for a wide range of electrical systems by allowing high inrush currents when starting up the system.

Tripping characteristics



2CCC413259Z0001



2CCC413003Z0002

Tripping behaviour compliant to UL 489

		Thermal tripping		Electromagnetic tripping
Characteristic	**Currents**	**Small test current**	**Large test current**	
Z	10 ... 100 A	1.00 x I_n	1.35 x I_n	4 x I_n ± 20%
K	10 ... 100 A	1.00 x I_n	1.35 x I_n	13 x I_n ± 20%

High Performance MCB S800

Characteristics of the S804U-UCZ, S804U-PVS5

Characteristics

UCZ

Tripping characteristic
Thermal tripping 1.00 ... 1.35 x I_n
Electromagnetic tripping 11 x I_n
Reference temperature 25 °C

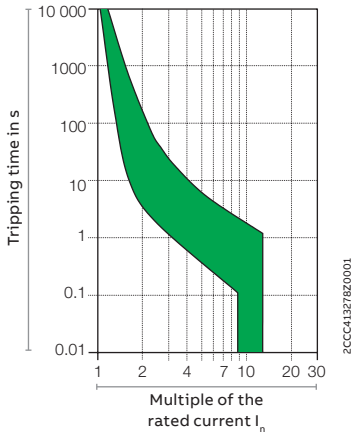
As circuit breaker for voltages up to 600 V DC. especially in datacenters.

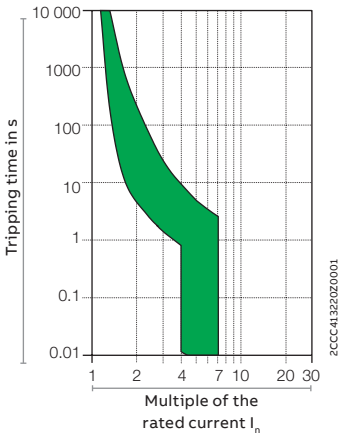
PVS

Tripping characteristic
Thermal tripping 1.13 ... 1.3 x I_n
Electromagnetic tripping 6 x I_n
Reference temperature 50 °C

As Ground-Fault Detector Interrupter (GFDI) in photovoltaic systems.

Tripping characteristics





Tripping behaviour compliant to UL 489B

		Thermal tripping		Electromagnetic tripping
Characteristic	**Currents**	**Small test current**	**Large test current**	
PVS	5 A	1.13 x I_n	1.30 x I_n	6 x I_n (DC)

Tripping behaviour compliant to UL 489

Z	10...80 A	1.00 x I_n	1.35 x I_n	11 x I_n (DC) ± 20%

Photovoltaic High Performance MCB

Characteristic of the S800PV-SP

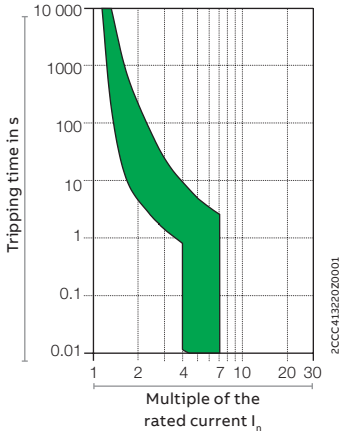
Characteristics

2CCC413246F0001

Tripping characteristic
Thermal tripping 1.05 ...1.3 x I_n
Electromagnetic tripping 6 x I_n
Reference temperature 30°C

DC protection independent of polarity in photovoltaic plants up to 1200 V DC at a time constant ≤ 5 ms.

Tripping characteristics



2CCC413220Z0001

Tripping behaviour compliant to IEC 60947-2

		Thermal tripping		Electromagnetic tripping
Characteristic	**Currents**	**Small test current**	**Large test current**	
PV-SP	5 ... 125 A	1.05 x I_n	1.30 x I_n	6 x I_n (DC)

Properties

Special features of S800

The S800S, -N, -C, -B and -HV high performance MCBs: safe innovation

The S800 high performance MCB limits energy and current in case of a short-circuit power cutt off. The specially designed double arcing chamber system, i. e. per pole are two arcing chambers, ensures excellent operating characteristics. The new S800B has only one arcing chamber. Additional exceptional features of the S800 series are:

Convincing:	Selectivity to upstream overcurrent protection devices due to a total switch-off time of only ≤ 2.5 ms.
Safe:	Excellent backup protection by limiting the energy to a value ≤ 100 000 A^2s (125 A / 50 kA). In case of short-circuit, there is a low load to the circuit and the location of the damage due to the high limitation of the let-through energy.
Loads:	Up to 125 A rated current
Checked:	S series up to 50 kA rated ultimate short-circuit breaking capacity I_{cu} N series up to 36 kA rated ultimate short-circuit breaking capacity I_{cu} C series up to 25 kA rated ultimate short-circuit breaking capacity I_{cu} B series up to 16 kA rated ultimate short-circuit breaking capacity I_{cu} HV series up to 4 kA rated ultimate short-circuit breaking capacity I_{cu}
Selectable:	Characteristics:
S series:	B, C, D, K, KM, UCB, UCK
N series:	B, C, D
C series:	B, C, D, K
B series:	B, C, D, K
HV series:	C, K
Compact:	Slight 27 mm width per pole
Flexible:	Accessories installed by the customer.

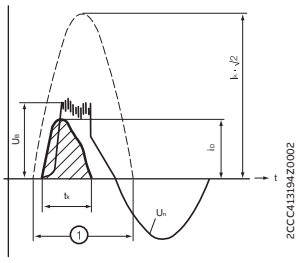
S800U: Highest safety now also ensured for UL applications

Convincing:	Covering of different voltage ranges (240 V AC, 600 V DC, 1000 V DC)
Safe:	Excellent backup protection due to limitation of energy.
Loads:	Up to 100 A rated current
Checked:	K-, Z series up to 50kA breaking capacity UCZ series up to 10kA breaking capacity PVS series up to 3kA breaking capacity
Selectable:	Characteristics: K, Z, UCZ, PVS
Compact:	Smallest sizes.
Flexible:	Accessories installed by the customer.
Standards:	UL489, UL489B, IEC 60947-2

Short description

Two triggers detect overcurrents, effect the switching station and provide short-circuit protection.

1.	The thermal trip for overload protection with time delay.
2.	The electromagnetic fast-acting trip with concrete anchor for short-circuit protection.



① 1 sinus half-wave
50 Hz ≙ T/2 = 10 ms

$I_k \times \sqrt{2}$	peak value of the prospective short-circuit current
i_D	max. let-through current of the S800 high performance MCB
U_n	supply voltage
U_B	build up and collapse of the arc voltage
t_K	Turn-off time of S800 high performance MCB

Properties

Special features of S800

2CCC413041F0002

Play it safe: display the operational state

The mechanical drive of the S800 high performance MCB is equipped with a trip-free release. It therefore switches independent of the actuating force or speed on the actuating lever. The trip position display thereby always reliably displays the exact position of the moving contact. The trip position provides additional trip detection allowing you to easily find the reason for the cut-off. Because the switch lever moves to the middle position in case of thermal or magnetic tripping, the user sees at a glance that this is an error state and can then initiate suitable measures.

*Middle position of switch lever, see picture

Reliable: the disconnector properties

In OFF position (0 position), the S800 high performance MCB guarantees safe electrical isolation of the circuit compliant to IEC 60947-2.

Flexible: the installation

The S800 high performance MCB can be directly mounted onto any position on the DIN mounting rail without any impairment to its characteristics. Because the pole dimensions are identical for all rated currents, installation in switching systems is simplified.

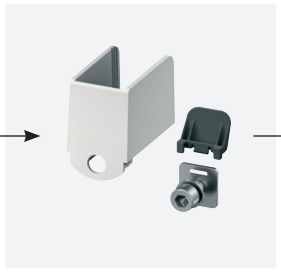
The S800 can be installed in different ways:

- together with other breakers in the same DIN rail horizontally or vertically
- as an individual breaker in a single fixed compartment where the breaker is switched on/off with a rotary handle from the door, and the breaker is mounted on the wall of the panel
- as an individual breaker in a single withdrawable module, when requirements for high availability in the installation are a must

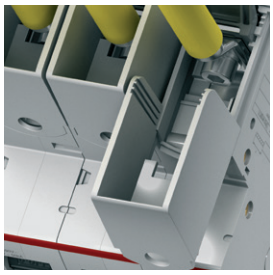
Cage and ring terminals

When ordering you can choose between cage terminals or ring terminal connectors. No matter which type you select, both connection options guarantee a high degree of reliability.

2CCC413038F0002



2CCC413046F0004



2CCC413039F0004

Doesn't let go: the replaceable terminal adapter*

The S800 standard equipment with interchangeable terminal adapter for wires, cables and rigid conductors guarantees a high level of flexibility and comfort. Fast and safe connection of the conductors is ensured by the "onboard terminal shutter" integrated into the body of the terminal, thereby preventing incorrect underclamping of the connections.

* Available for the S, N, C, U and PV series.

Properties

Special features of S800

Extra safe: Fire protection acc. to NF F 16-101 and NF F 16-102 (prEN45545-2)

The S800 high performance MCB provides standard compliance to the requirements of Standard prEN45545-2 (Railway applications – Fire Protection on railway vehicles – Part 2: Requirements for fire behaviour of materials and components). This standard is based on the French standard NF F 16-101/ NF F 16-102 and makes new requirements of the fire behaviour of the materials used. The main focus of attention with relation to fire protection is on the following:

- Flame spread
- Rate of heat release
- Smoke development
- Toxicity

The S800 high performance automatic meets the following classification compliant to NF F 16-101 and NF F 16-102:

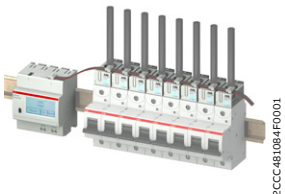
- I3F2
- I3 no permanent flame at 850°C
- F2 index of fume density and toxicity ≤ 40

More information regarding the use of S800 breakers in rolling stock applications is available in the Technical catalogue ‘DIN-Rail components for rolling stock applications 2CDC002053D0204’

Elevation

Up to 2000 meters above sea level, the rated characteristics of the S800 high performance MCB remain unchanged. With increasing height, the properties of the atmosphere change regarding composition, dielectricity, the cooling capacity and the pressure. Thus for altitudes over 2000m below values are valid.

Elevation	[m]	2000	3000	4000	5000
Rated impulse withstand voltage U_{imp}	[kV]	8	6	6	6
Rated operational voltage U_e	[V]	690	600	540	470
Max. rated current I_n	[A]	1 x I_n	0.96 x I_n	0.93 x I_n	0.9 x I_n



2CCC481084F0001

CMS – Current Measurement System

The CMS is a multichannel current measurement system for branch monitoring of alternating (AC) and direct (DC) currents up to 160 A. Various sensor types allow the mounting in every installation environment.

Companies are dependent on the trouble-free operation of their electrical systems. Monitoring every branch circuit of an installation with the CMS enables to detect deviations quickly before serious damage is caused. Furthermore branch monitoring gives the maximum transparency on where and how the electricity is used. It allows an effective energy management in order to save costs and to assign them fairly.

Up to 64 sensors can be connected to each Control Unit. The sensors measure root mean square values (AC / DC currents) (actual, min/max, hold values) and transmit their measurement data via the flat cable to the Control Unit. The measured values are displayed locally on the Control Unit’s touch display and can be queried remotely by an RS485 Modbus connection.

Properties

DC Performance

S800S-UC: The first choice as DC high performance MCB

The S800S-UC DC high performance MCB is in a wide range of DC applications at home. Due to their high rated operational voltage of up to 750 V DC the max. rated current of 125 A and the high breaking capaicty of up to 50 kA, make these devices suitable for applications, e.g.:

- DC track
- Galavanic applications
- Photovoltaics

S800S, N, and C: Up to 125 V DC on each pole

The AC range is also an interesting choice for DC applications up to 125 V DC per pole.

Properties

Special features of S800PV-SP, S800PV-SD

String protection with S800PV-SP

A large proportion of the costs for photovoltaic systems is tied up in the equipment for the DC generation. The S800PV-SP protects these investments in the event of a fault.

Convincing:	Suitable for up to 1500 V DC
Loadable:	String protection up to 125 A
	Reliable protection at high ambient temperatures
Tested:	Rated ultimate short-circuit breaking capacity Icu of 5 kA in accordance with IEC 60947-2 and Annex P
Fast:	Reclosable for minimum standstill times
Safe:	Disconnector properties, switching under load
Flexible:	Extensive range of accessories for remote shutdown and fault signalling

System isolation with S800PV-SD

The use of a DC isolator can be implemented reliably and in the minimum of space. Either you can choose the pole-independent S800PV-SD. The S800PV-SD is available as 2-,3- and 4-pole version up to 1500 V DC.

Convincing:	Suitable for up to 1500 V DC
Loadable:	System isolation up to 125 A
	No change in operating behaviour up to 60°C ambient temperature
	Reliable switching of ohmic loads including moderate overloads
Compact:	Minimum dimensions with maximum efficiency
Tested:	Short-time withstand current Icw of 1.5 kA in accordance with IEC 60947-3
Safe:	Disconnector properties, switching under load

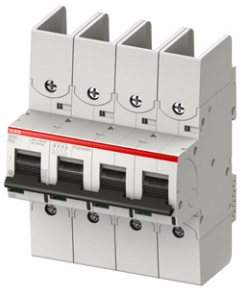
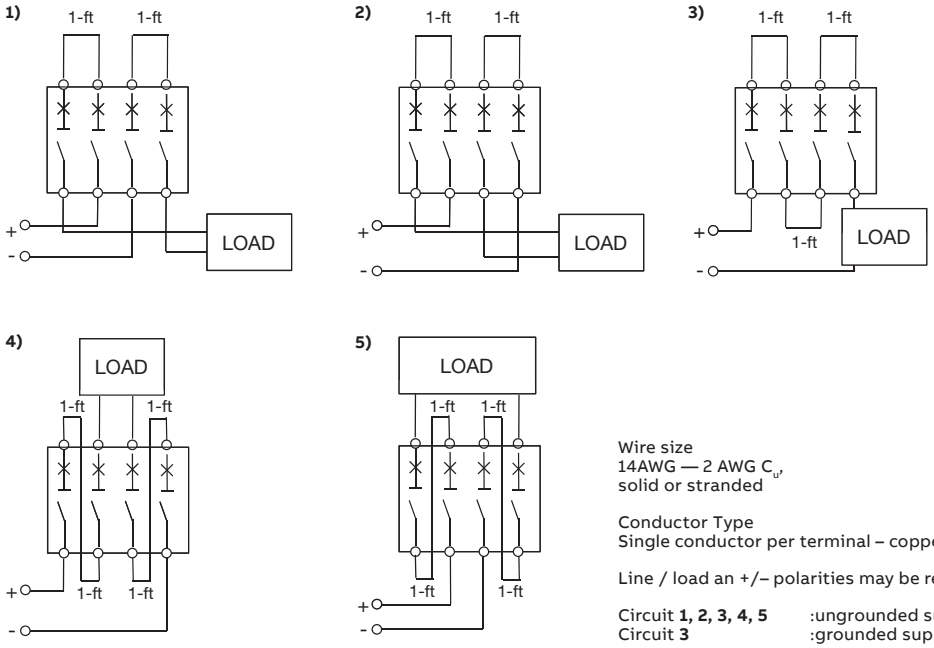
Properties

S804U-PVS5 High performance MCB for GFDI



GFDI = Ground Fault Detector Interrupter

The S804U-PVS5 is for GFDI application (Ground-Fault Detector Interrupter) in photovoltaic systems, with rated current 5 A and short-circuit current rating of 3 kA. The breaker is tested acc. to UL489B for 1000 V DC.



Wire size
14AWG — 2 AWG C_u,
solid or stranded

Conductor Type
Single conductor per terminal – copper only, 75C wire

Line / load an +/– polarities may be reversed

Circuit **1, 2, 3, 4, 5** :ungrounded supplies
Circuit **3** :grounded supplies

Properties

Special features of S800-RSU

2CCC413353F0001

S800 with S800-RSU

Known for its outstanding short circuit capacities of up to 50 kA and voltages of up to 690 VAC and 1200 V DC, S800 has become a convenient solution for the DIN Rail.
S800-RSU makes the use of S800 even more convenient: driven by a brushless high precision DC motor, S800-RSU ensures fast remote-controlled operation. Wiring and operation is easy: S800-RSU can be operated with standard MDRC pushbuttons and indicator lights or via programmable logic controllers (PLCs). Due to its low power consumption, compact power supply units can be chosen.

Applications and Benefits:

Photovoltaics: Remote-controlled string management and convenient GFDI solutions

For a new generation of combiner boxes: used as a substitute for string or array fuses, S800PV or S804U-PVS5 in combination with S800-RSU ensures maximum PV yield due to minimum downtimes in case of failure or maintenance. For selective string management, additional switch disconnectors are no longer needed. S800-RSU adds to S800PV or S804U-PVS5 outstanding benefits for the PV-industry, allowing automated ground fault detection and interruption applications following UL1741.

Critical Power: Uninterrupted Power Supply Units

Fast, reliable backup protection for UPS systems: S800-RSU and S500-RSU provide outstanding quality and performance by switching a backup system quickly and reliably at extremely low stand-by current.

Telecommunications: Remote transmitter substations

The Remote Switching Units RSU minimize time-consuming visits to remote substations. Downtimes can be kept low due to convenient remote resetting of a tripped High Performance MCB.

Wind Power: Turbine towers

Inaccessible areas like wind turbine towers require immediate action in the case of overload or short circuits. The automatic switching capability of the High Performance MCB leads to reduction of cost-intensive fuse replacement or manual resetting of circuit breakers.

Product Facts:

- Driven by Swiss-made brushless high precision DC motors
- Field mountable on any multi-pole S800 High Performance MCB
- Almost all accessories can be mounted
- Short switching times and low power consumption
- Mechanically lockable
- Compatible to ABB pro M compact 9 mm pushbuttons and indicator lights
- Compatible to ABB Programmable Logic Controllers
- User safety due to hand-switching recognition
- Low stand-by current
- Connecting has to be done by a 10-pole Micro Fit 3.0 plug (not included in delivery)
- Two versions
  - S800-RSU-H IEC-Version according to IEC 60947-2
  - S800W-RSU World version according to IEC 60947-2 and UL489

Properties

Special features of S800S-SCL-SR

Group protection

In comparison to other short-circuit limiter you need only one S800S-SCL-SR for several motor starters or high performance miniature circuit breakers. With the requirement that the rated current of the short-circuit limiter does not exceed the total sum of the rated S800S currents of all downstream motor starters or circuit breakers. Furthermore the sum of all load currents including inrush currents shall not exceed the maximum permissible load of the S800S-SCL-SR. Therefore the main application of the new S800S-SCL-SR is group protection. Several downstream motor protection combinations or several high performance miniature circuit breakers can be protected with only one S800S-SCL-SR.

Single-line protection

For single-line protection we recommend to use the standard short-circuit limiter S803S-SCL. It has a toggle and will trip in case of a failure.

Current continuity

In case of a failure by using the S800S-SCL-SR as group protection only the defective device will trip; all other devices will keep doing their work.
Therefore you will have a very low breakdown, because only one motor will stop and not all of them.

Maximum system availability is given.

Properties

International device releases

Unique: Conformity to standards and quality assurance

Both the S800 high performance MCB as well as its accessories comply to international standards EN/IEC 60898-1, IEC 60947-2 and UL 489. Conformity to the above-mentioned product standards and guidelines are certified by the electrosuisse, a member of the IECEE and the Underwrites Laboratories Inc. The quality assurance system of ABB Switzerland Ltd. Low Voltage Products complies to the international standard ISO 9001:2000. The efforts of ISO14001-certified ABB Switzerland Ltd. Low Voltage Products within the field of environmental protection are not only limited to compliance to international standards; we are also engaged and active of our own accord in protecting the environment – and for achieving the targets of reduction in CO2 emissions we have received as confirmation the EnAW label of the economic energy agency. To retain this label, an independent check is made every two years.

We are committed to a holistic approach in the reduction of environmental pollution. Among other things, this is manifested in our choice of non-toxic plastics, recyclable packaging material and environmentally sound handling of resources.

S800-AUX

Auxiliary contact for external display

The S800-AUX auxiliary contact is for electrical display of the operating state of the high performance MCB. Both changeover contacts always switch simultaneously with the live conductor contact and detect the following operating states:

- Manual tripping
- Tripping due to thermal overload
- Tripping due to magnetic overload (short-circuit)

Mode of function of the test button

The test button is operated by a tool and allows the user to simulate the mode of function of the auxiliary contact when switched on without tripping the high performance MCB itself.

Mode of function of the two changeover contacts

- Off position of the high performance MCB — contacts 11–12 and 21–22 closed
- On position of the high performance MCB — contacts 11–14 und 21–24 closed

Mounting ability of the auxiliary contact

- Two S800-AUX auxiliary contacts can be mounted by the user at the left on the high performance MCB.

2CCC413070F0001

S800-AUX/ALT

Combined auxiliary and signal contact for the external display

The S800-AUX/ALT combined auxiliary and signal contact is used for electrical signaling of the operating state of the high performance MCB.
The AUX auxiliary contact always switches simultaneously with the live conductor contact and detect the following forms of tripping:

- Manual switch on/off
- Tripping due to thermal overload
- Tripping due to magnetic overload (short-circuit)
- Tripping by S800-SOR or S800-UVR

The ALT signal contact detects the following forms of tripping of the high performance MCB:

- Tripping due to thermal overload
- Tripping due to magnetic overload (short-circuit)
- Tripping by S800-SOR or S800-UVR

Mode of function of the test button

The test button is operated by a tool and allows the user to simulate the mode of function of the combined auxiliary and signal contact when switched on without tripping the high performance MCB itself.

Mode of function of the ALT reset button

The reset button, which can be used at will, resets the ALT signal contact after a tripping.
The high performance MCB is switched on independent of the state of the ALT signal contact.

Mode of function of the AUX changeover contact

- Off position of the high performance MCB — Contact 11–12 closed
- On position of the high performance MCB — Contact 11–14 closed

Mode of function of the ALT changeover contact

- No ALT tripping — Contact 95–96 closed
- ALT tripping — Contact 95–98 closed

S800-NT
Disconnectable neutral conductor 63 A
The S800 high performance MCB is force-opened before actuating the disconnectable neutral conductor S800-NT.

Mounting ability of the S800-NT neutral conductor
The neutral conductor can be mounted by the user at the right on the high performance MCB.

2CCC413353F0001

S800-RSU-H IEC version
S800W-RSU World version
Remote Switching Units for High Performance MCB
The S800-RSU makes the use of S800 even more convenient. Driven by a brushless high precision DC motor, S800-RSU ensures fast remote-controlled operation.

Mounting ability
The S800-RSU is mountable on any multipole S800 High Performance MCB. Wiring and operation is feasible on field. The connection has to be done by a 10-pole Micro Fit 3.0 (not included in delivery). S800-RSU operated with standard MDRC pushbuttons and indicator lights or can be done via programmable logic controllers (PLCs).

Switching times

OFF –> ON from signal to contact closing	<<500 ms
ON –> OFF from signal to contact opening	<<250 ms
TRIP –> OFF –> ON from signal to contact closing	<<1500 ms

For differing requirements, please contact your local ABB partner

Safety Intelligence
- When detecting manual use, inputs are deactivated for 10 seconds
- If the spindle is rotated more than 360°, all outputs become active
- Manual switch off via lever is possible (S803, S804)
- Manual switch on via lever is not possible (S802)
- RSU is locked for five minutes after three switching attempts leading to a trip
- Mechanical fixation via lock slider blocking the spindle

10-pole Micro Fit 3.0 plug with 12 loose crimped contacts. You need tongs for connecting.

2CCC413239F0001

S800-SOR
Shunt opening release

The S800-SOR shunt opening release is for remote release of the S800- high performance MCB using an electrical impulse. Operation of the trigger is guaranteed at a voltage between 70 % and 110 % of the rated mains voltage Un both for AC and DC.

Mounting ability of the S800-SOR operating current release

The S800-SOR can be mounted by the user at the left side of the high performance MCB.

2CCC413240F0001

S800-UVR
Undervoltage release

The S800-UVR undervoltage release can be used as an emergency-stop cut-as by use of suitable emergency stop buttons. The undervoltage release switches the power supply to the high performance MCB off in case of a failure or if the value falls below 0.7 x Un. After tripping, the high performance MCB can be switched back on as soon as the voltage is over 0.85 x U_n.

Mounting ability of the S800-UVR undervoltage release

The S800-UVR can be mounted by the user at the left side of the high performance MCB.

2CCC413019F0002

S803S-SCL
Short-circuit current limiter

The S803S used together with an S803S-SCL ensures reliable switch-off of short-circuit currents up to **100 kA**, at an operating voltage of 440 V AC and over the entire rated current range of up to 125 A.
For applications at 690 V AC, the combination of S803S-SCL ensures reliable short-circuit protection up to **50 kA**; here also, this is ensured over the entire rated current range up to 125 A, typical for the S800.

Example combinations	Rated operational voltage U_e	Ultimate short-circuit breaking capacity I_{cu}	Service short-circuit breaking capacity I_{cs}
S803S-SCL125 + S803S-C125	440 V AC 690 V AC	100 kA 50 kA	100 kA 50 kA
S803S-SCL63 + S803S-K63	440 V AC 690 V AC	100 kA 50 kA	100 kA 50 kA
S803S-SCL32 + S803S-B16	440 V AC 690 V AC	100 kA 50 kA	100 kA 50 kA

Properties
Accessories

S800-SCL-SR

Self-resetting short-circuit limiter

The S800-SCL-SR can be used together with S800S High Performance MCB or Manual Motor Starters. It limits the short-circuit current until the downstream means of protection trips. Its current continuity makes it as the ideal solution for group protection. All parallel branches remain operative.

Minimum cable length between S800-SCL-SR/S803S-SCL and downstream devices (Connection has to be short-circuit proofed acc. to IEC 61439-1)

100/125A	250mm	35mm²

Properties
Accessories

S800-RD
Rotary drive

The rotary drive for 2–4 pole devices can be delivered for assembly on the switching field door. Switching is effortless due to the ergonomic design of the swivel lever. It is equipped with a lock for the OFF position that prevents switching on of the S800 high performance MCB.
The slot hole of the lock can accept up to 3 padlocks with lug diameters of 7 mm (not included in delivery). Operation of the trigger and a view of the characteristics are not prevented
Additionally, a rotary drive can also be supplied to switch machines; it has a red grip on a yellow background.
The rotary drive on the switching field door is comprised of the following three components:

- Rotary handle S800-RHE-H, -EM
- Axle (500 mm) S800-RHE-S

S800-IP9
Intermediate piece

The S800-IP9 intermediate piece fits the profile of the high performance MCB and is used to fill in empty device slots. Thanks to its width of just 9mm, the slots of all devices of the S800 range can be expanded using this intermediate piece.

S800-PLL
Padlock device

The S800-PLL padlock device safely prevents unintentional switching on and off. Simply insert the lug of the padlock device through the borehole on the high performance MCB and lock with a padlock with lug diameter Ø 4 mm (not included in delivery). Even when the high performance MCB is secured with an padlock device against unintentional switching off, tripping remains possible in case of overload or short-circuit by the S800-SOR, S800-UVR and DDA800.

S800U-PLL
Locking device – for the American market

The S800U-PLL locking device prevents unintentional switch-on or off of the S800U high performance MCB, or switch on/off by third parties. It is mounted at the side of the high performance MCB and can only be removed using a special tool. A standardised American padlock (not included in delivery) is hung onto the round recess on the locking device, which can be secured by max six locks. Of course, tripping is possible by the S800-SOR or S800-UVR in case of overload or short-circuit.

Properties
Accessories

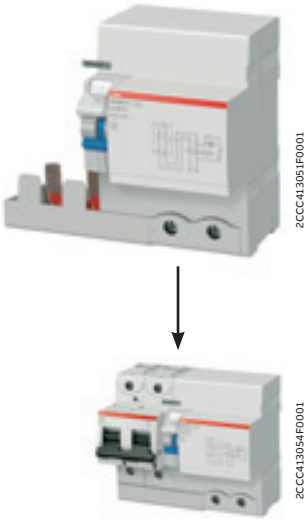
S800-CT, -RT
Interchangeable adapter kit
The S800 interchangeable adapter kit allows the cable clamp – ring terminal connections to be exchanged. Ring terminal connection -> Cage Terminal connection
The following is included in the S800-CT replaceable interchangeable adapter kit:
- Cage terminal
- Insulator

Cage Terminal connection -> ring terminal connection
The following is included in the S800-RT replaceable interchangeable adapter kit:
- Nut, insulation nut – cable lug, Allen screw
- Insulator with 25 mm insulation walls

S800-ILS
Identification labelling system
The individual identification labelling system for ILS legend plates is a DIN A5 polyester foil for inkjet and laser printers with high temperature resistance (if a laser printer is used please check whether self-sticking foils with a thickness of 250 µm can be printed with it). The 3M™9471 LE adhesive backing is UL-approved with Appl. No. MH 11410. The single plates are butt-cut on one side. Can be manually labelled with ink, pen, pencil and felt pen.

S802-LINK50
Pole connector up to 50 A
The pole connector S802-LINK50 can be used up to 50 A.

S802-LINK125
Pole connector up to 125 A
The pole connector S802-LINK125 can be used up to 125 A.



DDA800
RCD Block
RCD blocks from the DDA800 family can be connected to the S800 high performance MCB. The DDA800 can be used both for sine-shaped AC fault currents (type AC) as well as for pulsed DC fault currents (type A). Typical ABB: Selective and short-term delay devices are also available The functionality of the switching device can be checked at any time with the test button. The DDA800 FI switches ensure effective protection against fire and explosion. Devices with In ≤ 30 mA guarantee the protection of persons against shock currents caused by both direct and indirect touching in addition to the obligatory safety measures prescribed by the safety and accident-prevention regulations.
The DDA800 blocks comply to standard:
- IEC/EN 60947-2 Annex B

Mounting ability of the DDA800 RCD blocks
The leakage current trigger can be mounted by the user at the right on the live conductor.

Properties
Accessories

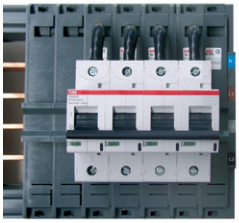
2CCC413060F0001

S800 Busbar system

The S800 busbar system is comprised of:

S804-BBPC120	120 mm2 feed block, 4-pole
S804-BB250	250 A busbar, 3-pole and neutral with 24 contacts pins
S804-BB6	250 A busbar, 3-pole with 6 contacts pins
S803-BB250	250 A busbar, 3-pole with 24 terminal lugs and 2 end caps
S803-BBPC120	120 mm2 feed block, 3-pole
S800-BBIC	Optional contact-protection cap for exposed terminal lugs
S800-END	Optional end cap

The busbar, which can be shortened in length by the user, ensures the safe and rational connection of the S800 high performance MCB. A cable cross-section of up to 120 mm^2 can be connected at the feed block.



2CCC413048F0001

Unifix H

The Unifix H System with feed module up to 400 A provides the user a high standardised design of energy distribution. The wide range of assembly and adapter combinations which are also available for the S800 range increase flexibility allowing for compact and cost-effective design of the electrical distribution network.

The following adapters are available for the S800 range:

- ED2557 L1 ≤32 A
- ED2558 L2 ≤32 A
- ED2559 L3 ≤32 A
- ED2560 N ≤32 A
- ED2551 L1 125 A
- ED2552 L2 125 A
- ED2553 L3 125 A
- ED2554 N 125 A
- ED2550 filler

Properties
Definitions

Rated short-circuit capacity I_{cn}
Compliant to EN 60898-1
The maximum current which a switching device can switch off without damage at a rated operational voltage and rated operational frequency. It is specified as an effective value.

Rated ultimate short-circuit breaking capacity I_{cu}
Compliant to EN 60947-2
Ultimate short-circuit breaking capacity that a circuit breaker can switch off without damage at a rated operational voltage and rated operational frequency. It is specified as an effective value.

Rated service short-circuit breaking capacity I_{cs}
Compliant to EN 60947-2
Service short-circuit breaking capacity that a circuit breaker can switch off without damage at a rated operational voltage and rated operational frequency. It is specified as an effective value.

Rated insulation voltage U_i
The rated insulation voltage is the voltage to which dielectric checks and creepage distances refer. The maximum rated operational voltage must not exceed its rated insulation voltage.

Rated impulse withstand voltage U_{imp}
Peak of a withstand voltage of a specified form and polarity with which the circuit can be loaded under specified test conditions without a breakdown and to which clearances relate. The rated impulse withstand voltage must be equal to or greater than the values of the withstand over-voltages (transient overvoltages) which occur in the System in which the device is used.

Backup protection
Assignment of two overcurrent protective devices in series, where the protective device, generally but not necessarily on the supply side, effects the overcurrent protection with or without the assistance of the other protective device and prevents excessive stress on the latter [IEC 60947-1, definition 2.5.24].

Total selectivity
Overcurrent discrimination where, in the presence of two overcurrent protective devices in series, the protective device on the load side effects the protection without causing the other protective device to operate [IEC 60947-2, definition 2.17.2].

Partial selectivity
Overcurrent discrimination where, in the presence of two overcurrent protective devices in series, the protective device on the load side effects the protection up to a given level of overcurrent, without causing the other protective device to operate [IEC 60947-2, definition 2.17.3].

Technical data

Performance at different ambient temperatures

Derating of load capability of S800

The table refers to the product standard IEC 60947-2.
These values are only valid if the mounting conditions are similar to the IEC 60947-2.
The rated value of the current of the S800 refers to a calibration temperature of 30 °C for characteristics B, C and D.

For characteristics K, UCK and PV-SP it refers to 40 °C and the UL-version (S800U) refers to a calibration temperature of 25 °C.
Max. operating current depending on the ambient temperature of S800 with characteristic B, C, D, UCB.

B, C, D, UCB	Ambient temperature (°C)

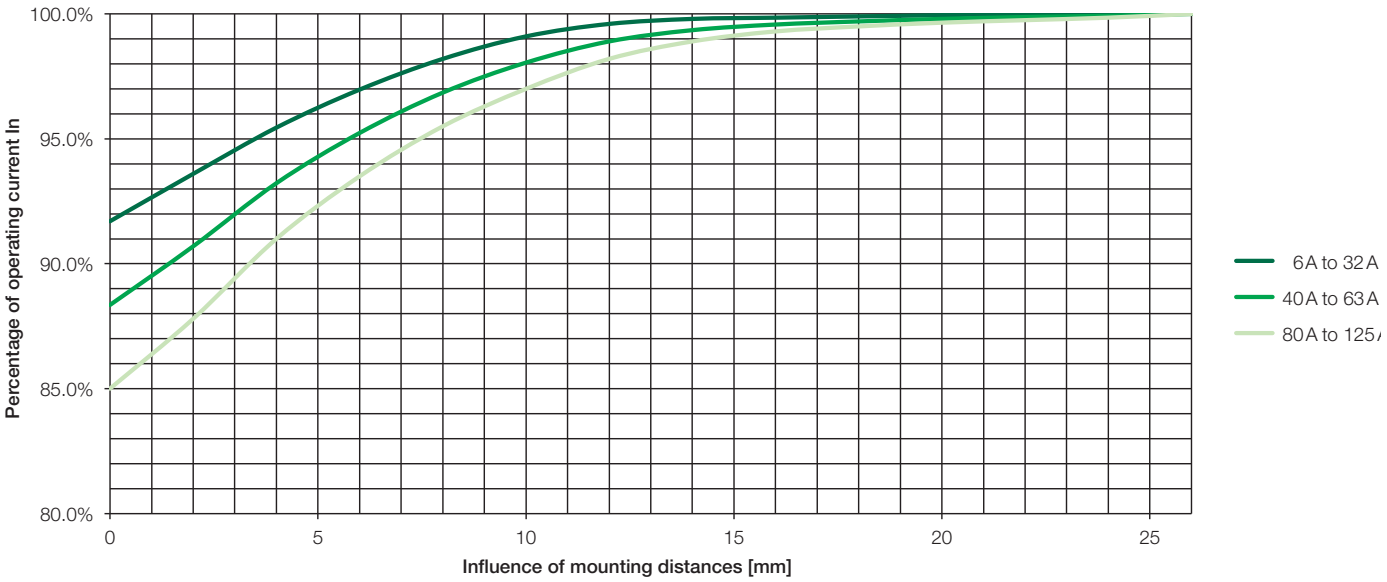
Max. operating current depending on the ambient temperature of S804U - PVSP5, - PVS5

- PVSP5, - PVS5	Ambient temperature [°C]																			
I_n [A]	–25	–20	–15	–10	–5	0	5	10	15	20	25	30	35	40	45	50	55	60	65	70
5	6.5	6.4	6.3	6.2	6.1	6.0	5.9	5.8	5.7	5.6	5.5	5.4	5.3	5.2	5.1	5.0	4.9	4.8	4.7	4.6

Influence of mounting distances between the devices

Multiply the rated current referring to your max. occurent termperature with the factor of "influence of mounting distances"
Example: 2 x S802B-B125 at T= 35 °C with 5 mm distance
I_n = 120.4 A x 92.1 % = 110.9 A



Further influencing factors, which can lead to a reduction of the maximum operating current, are:

- Shortening the cable length compared to IEC 60947-1 / -2
- Reducing the cable cross section compared to IEC 60947-1 / -2
- Accumulation of cables

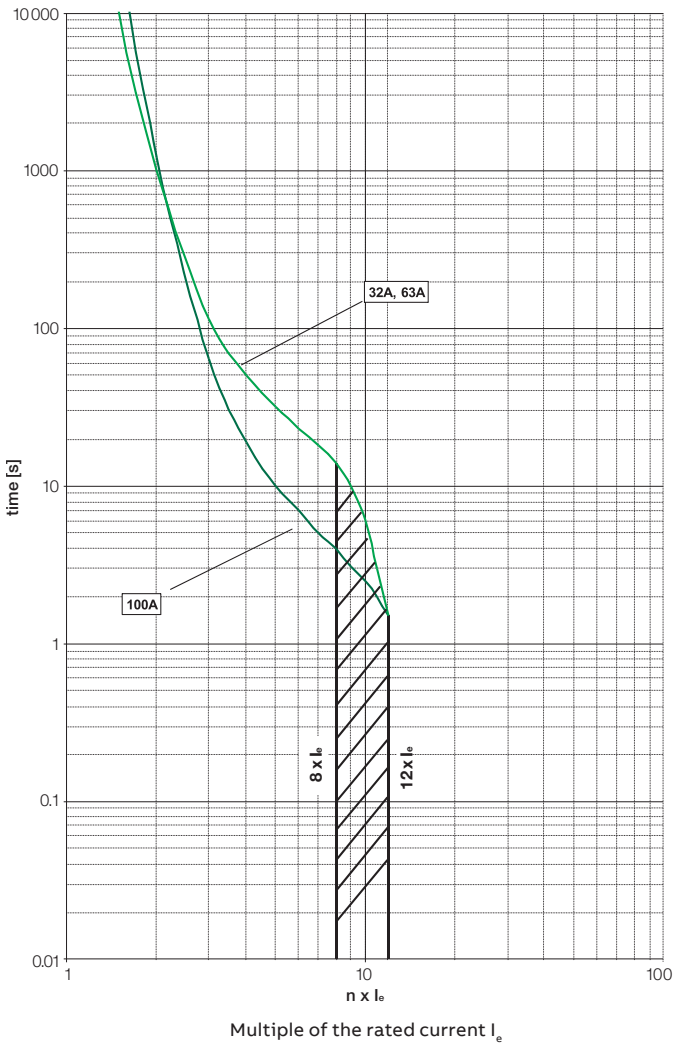
Installation requirements

The total sum of the rated currents of all down-stream motor starters or circuit breakers shall not exceed the rated current of the S800-SCL-SR (valid also for HV version). Furthermore the sum of all load currents including inrush currents shall not exceed the maximum permissible load of the S800-SCL-SR (valid also for HV version).

Maximum load



Multiple of the rated current I_e

Approved combinations

S800-SCL-SR/S803S-SCL with S800 and motor starters

A new web tool SOC - Selected Optimized Coordination is now available at http://applications.it.abb.com/SOC_SNB and can be used to find all the available combinations between S800 portfolio and other ABB devices:

- Motor starting and protection
- Selectivity among protection devices
- Back-up among protection devices
- Protection of other equipments like switch-disconnectors

Approved combinations with high performance MCB S800

The tables are based on measurements using cable as stated in IEC 60947-2. Any derivation from these cable diameters and lengths might lead to higher temperatures. Therefore ABB recommends to perform temperature measurements to verify the real maximum temperature in the application.

Properties of S500

High Performance MCB S500

Characteristics of the adjustable and fixed breakers

Characteristics

K

2CCC412002F0001

Tripping characteristic K
Thermal tripping
1.05 ... 1.20 x I_n
Electromagnetic tripping
< 0.21 8 ... 10 x I_n AC
< 0.42 10 ... 12 x I_n AC
> 0.42 12 ... 14 x I_n AC
Calibration temperature 40°C

As miniature circuit breaker for the protection of single-phase and three-phase motors. For use in fuseless motor control centers (MCC). As circuit breaker with adjustable rated residual operating current, e. g. for transformers.

UC-K

2CCC412001F0001

Tripping characteristic UC-K
Thermal tripping
1.05 ... 1.20 x I_n (DC)
Electromagnetic tripping
< 0.21 8 ... 10 x I_n DC
< 0.42 10 ... 12 x I_n DC
> 0.42 12 ... 14 x I_n DC
Calibration temperature 40°C

As miniature circuit breaker for circuits and consumers in DC networks and DC driven vehicles.
With adjustable rated residual operating current.

HV-K

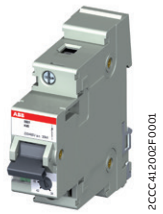
Properties

Special features of S500



The high performance MCB S500 – long established

It adds adjustability (among other things) to the S800 range: The S500-K and S500UC-K devices provide the option of infinitely adjusting the rated tripping current. This has the benefit of a very precise tripping operation.
The fixed-setting S500HV-K provides the best solution for applications up to 1000 V AC.
For special applications, there is the S500X, which can be configured completely in accordance with the customer's requirements.
The S500X-AG0084 has a fixed setting and is predominantly used for motor protection with separate overload protection.
The S500X-AG1499 can be adjusted; due to its delayed tripping, it is mainly used to protect transformers.

S500-K: Motor protection

The S500-K may be used up to a current rating of 11 A for direct operational switching of motors.
The motor starting time should not be longer than 2,5 seconds to avoid nuisance tripping when motor starting is repeated in quick succession.

Convincing:	Approved according to UL1077
Safe:	Optimum coordination with A-contactors
Loads:	Adjustable range from 0,1 to 45 A
Checked:	Up to 50 kA rated ultimate short-circuit breaking capacity I_{cu}
Selectable:	Available as 1- to 4-pole breakers
Compact:	Minimal dimension
Flexible:	Wide range of accessories

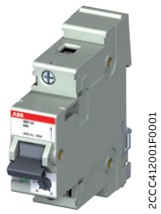
Properties

Special features of S500



S500UC-K: DC circuit protection

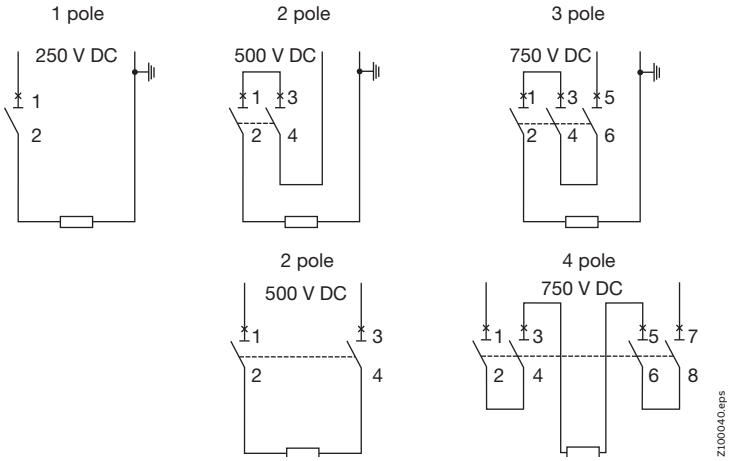
The S500UC-K is intended for DC applications.
Voltages up to 250 V DC per pole can be switched with time constants ≤ 15ms.
Higher voltages up to 750 V DC are switched by series connection (polarity-independent).

Convincing:	Approved according to UL1077
Safe:	Independent polarity connection
Loads:	Range of adjustment from 0,1 to 45 A
Checked:	Up to 30 kA rated ultimate short-circuit breaking capacity I_{cu}
Selectable:	Available as 1- to 4-pole breaker
Compact:	Smallest sizes
Flexible:	Wide range of accessories

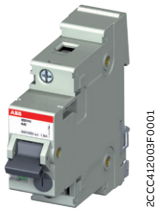
S500UC-K: Up to 250 V DC each pole

The S500UC-K is only for DC applications.

Earthed network



Unearthed network



S500HV-K: For applications up to 1000 VAC

The S500HV has a fixed rated current. It is used as high performance MCB for applications up to 1000 VAC – from the mining industry excess the power distribution up to tunnelling. Between two S500HV-K (1, 2 or 3 poles) or a S500HV-K and a conductive part, the 12,5 mm separating barrier S500-F1 must be installed. The separating barrier must be ordered separately.

Convincing:	Can be used up to 1000 VAC
Safe:	Reliable for high ambient temperatures
Loads:	Available from 1 to 45 A
Checked:	Up to 1,5 kA rated ultimate short-circuit breaking capacity I_{cu}
Selectable:	Available as 1- to 3-pole breaker
Compact:	Smallest sizes
Flexible:	Wide range of accessories

Properties

Special features of S500

S500X: Customized circuit breaker

The S500X is a customized breaker and suitable for special applications.
Following adjustments can be conducted:

- Special ambient temperature
- Special trip characteristics through adaptation of thermal and/or electromagnetic release
- Calibration of intermediate values

The marking of S500X varies in the identification number, characterized by 2 letters and 4 digits.

Convincing:	Customized breaker
Safe:	Available with fixed or adjustable rated current
Loads:	Available with max. 63 A
Checked:	Up to 50 kA rated ultimate short-circuit breaking capacity I_{cu}
Compact:	Smallest sizes
Flexible:	Wide range of accessories

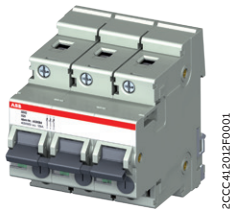
S500X-AG1499: Protection of tranformers

The S500X-AG1499 is prevailing used to protect transformers.
The late magnetic release and the high rated ultimate short-circuit breaking capacity of up to 50 kA makes this breaker unique.

Convincing:	Can be used up to 690 VAC
Safe:	Magnetic release is between 16 to 21 x I_n
Loads:	Available from 1,6 to 63 A
Checked:	Up to 50 kA rated ultimate short-circuit breaking capacity I_{cu}
Compact:	Smallest sizes
Flexible:	Wide range of accessories

Properties

Special features of S500



S503X-AG0084: Motor protection up to 50 kA

The S503X-AG0084 is suitable for high short-circuit currents with an rated ultimate short-circuit breaking capacity up to 50 kA.

Convincing:	Can be used up to 690 VAC
Safe:	Possesses only an electromagnetic release
Loads:	Available from 0.8 to 63 A
Checked:	Up to 50 kA rated ultimate short-circuit breaking capacity I_{cu}
Compact:	Smallest sizes
Flexible:	Wide range of accessories

Properties

Special features of F500

F500-K: RCD with motor protection

The F500-K is an overcurrent breaker with motor protection characteristic. The residual current protection release is effective with sinusoidal alternating and pulsating DC fault current (Type A, according to IEC 60947-2, Annex B).
The high performance breaker F500-K ensures special protection in high power networks against:

- Dangerous residual currents at excessive contact voltage by physical contact
- Overheating of electrical operating equipment (motors) by overcurrent
- Overload and short-circuit

Convincing:	High rated operating voltage up to 690 VAC
Safe:	No thermal release required on contactor
Loads:	Switching of all poles in event of a fault

F500S...0.3 S: Selective RCD with overload protection

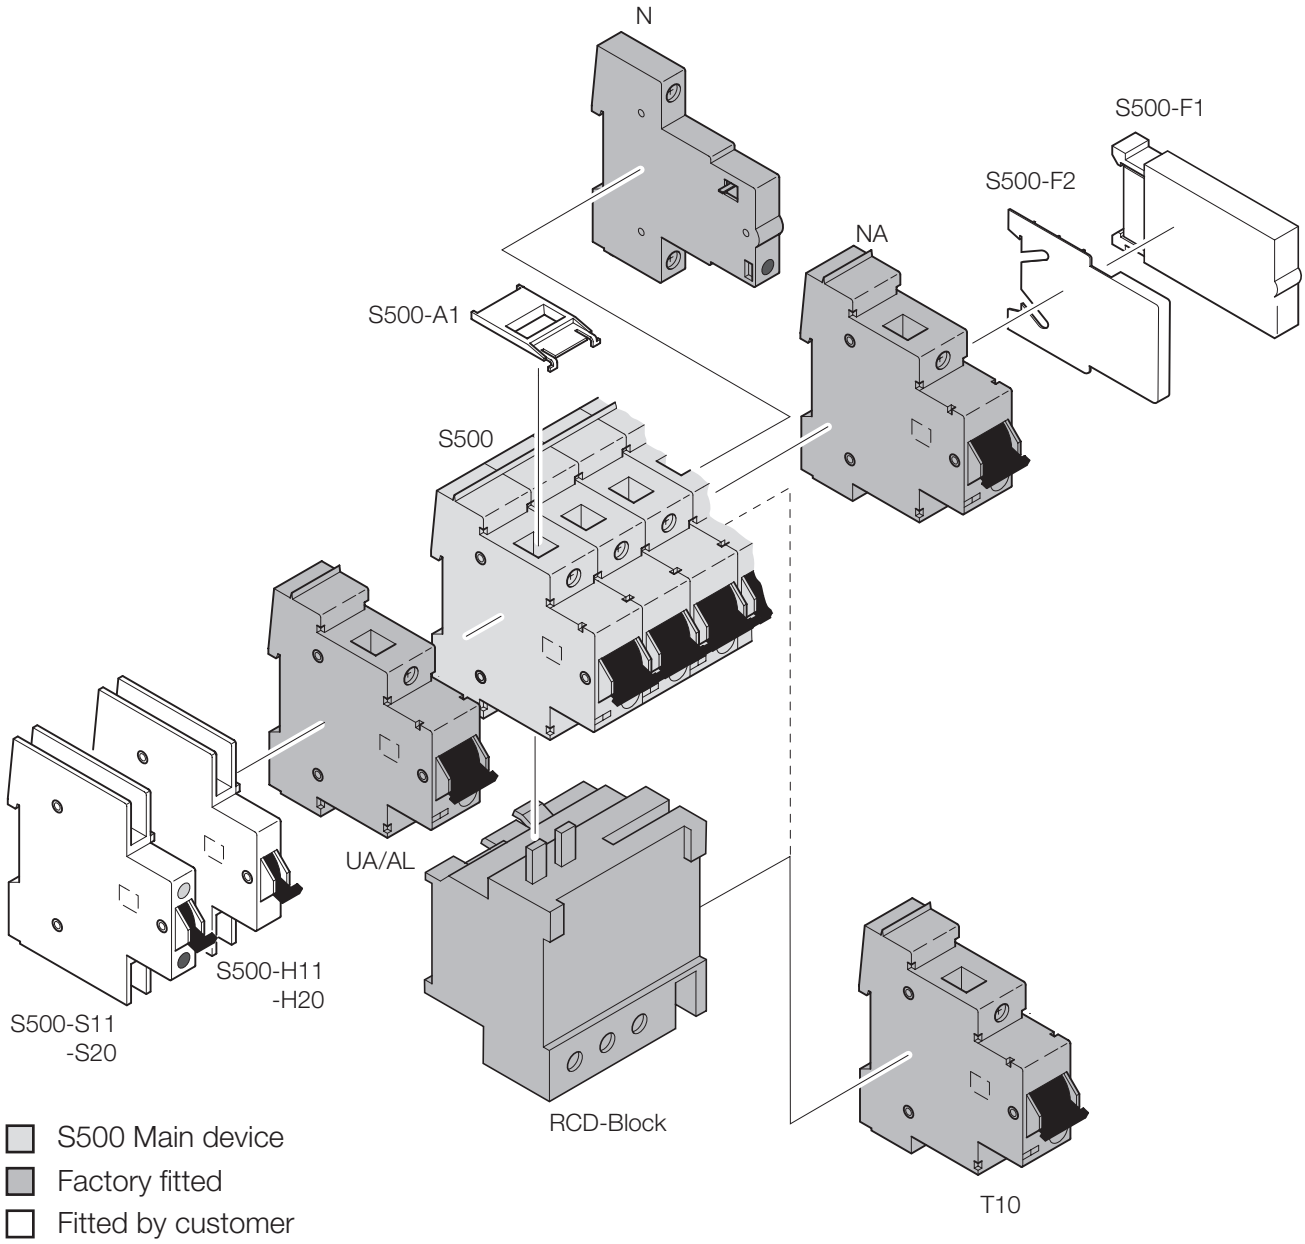
The delayed RCD circuit breaker also bears the the symbol S in addition to its type designation. The F500S...0.3 S selective residual current circuit breakers ensure selectivity with respect to following sensitive RCD circuit breakers. F500S...0.3S selective residual current circuit breakers are only used for material protection.
Subsequent short-time delayed G-types also behave selectively if connected after a F500S...0.3 S.
Capacitive discharge currents accompanied by high current peaks can be caused by:

- Long line capacitances
- Large number of fluorescent lamps (particularly when using electronic ballast units)
- Electronic equipment and components (PC terminals, PLCs, voltage converters, etc.)
- Transient network overvoltages

Convincing:	High rated operating voltage up to 400/690 VAC
Safe:	High rated breaking capacity, 50 kA at 230/400 VAC
Loads:	Clear contact position indication for all poles
Checked:	RCD pulsating DC sensitivity (Type A, according to IEC 60947-2, Annex B)
Flexible:	Available with various rated tripping current

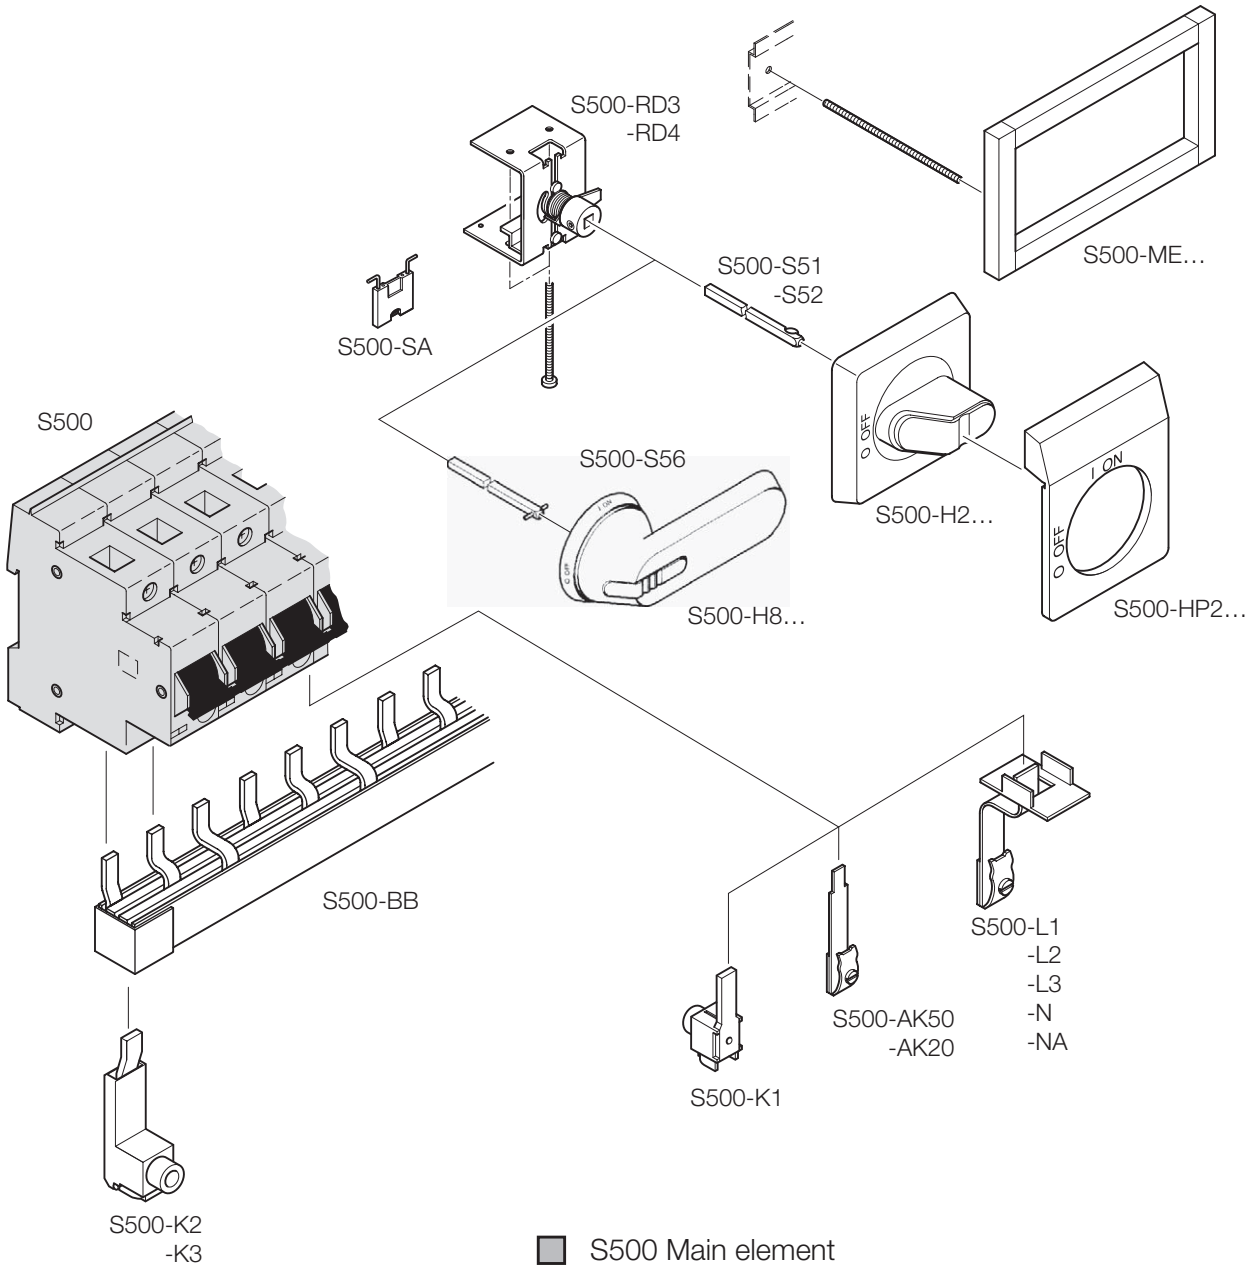
Overview of accessories

Accessories for breakers

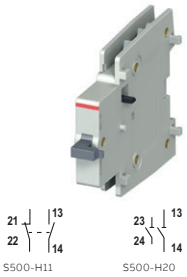


Overview of accessories

General accessories



Properties
Accessories



S500-H11, -H20

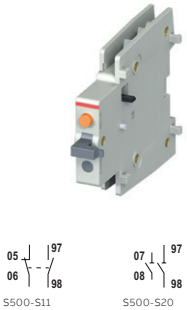
Auxiliary contact

The auxiliary contact is for electrical display of the operating state of the high performance MCB S500. Both changeover contacts always switch simultaneously with the live conductor contact and detect the following operating states:

- Manual tripping
- Tripping due to thermal overload
- Tripping due to magnetic overload (short-circuit)

Mounting ability of the auxiliary contact S500-H11, -H20

The auxiliary contacts can be mounted at the left on the high performance MCB S500. Max. 2 auxiliary contacts can be fitted per high performance MCB S500.



S500-S11, -S20

Signal contact

The signal contact is used for electrical signaling of the operating state of the high performance MCB S500. Signal contact switches resp. detect following form of tripping:

- Tripping due to thermal overload
- Tripping due to magnetic overload (short-circuit)
- Residual current tripping
- Tripping by residual current release

Mounting ability of the signal contacts S500-S11, -S20

The signal contacts can be mounted at the left on the high performance MCB S500. Max. 1 signal contacts can be fitted per high performance MCB S500. When using auxiliary and signal contacts the auxiliary contact must first be snapped directly onto the circuit breaker S500.

On each circuit breaker can be fitted:

	1 Auxiliary contact
or	1 Signal contact
or	2 Auxiliary contacts
or	1 Auxiliary- and 1 signal contact

...NA

Switched neutral conductor

The switched neutral conductor switches simultaneously with the high performance MCB S500.

Mounting ability of the switched neutral conductor ...NA

The neutral conductor is be mounted by the factory at the right on the high performance MCB S500.

Properties
Accessories

...N

Separating neutral conductor

The S500 high performance MCB is force-opened before actuating the separating neutral conductor.

Mounting ability of the separating neutral conductor ...N

The separating neutral conductor is be mounted by the factory at the right on the high performance MCB S500.

...+UA

Undervoltage release

The ...+UA undervoltage release can be used as an emergency-stop cut-as by use of suitable emergency stop buttons. The undervoltage release switches the power supply to the high performance MCB off in case of a failure or if the value falls below 0.7x Un. After tripping, the high performance MCB can be switched back on as soon as the voltage is over 0.85 x Un.

Mounting ability of the undervoltage release ...+UA

The undervoltage release is be mounted by the factory at the left side of the high performance MCB S500.

...+AL

Shunt release

The ...+AL shunt opening release is for remote release of the S500 high performance MCB using an electrical impulse (no persistent command). Operation of the trigger is guaranteed at a voltage between 70% and 110% of the rated mains voltage Un both for AC and DC.

Mounting ability of the shunt release ...+AL

The shunt release is be mounted by the factory at the left side of the high performance MCB S500.

Properties
Accessories

T10
RCD release signal contact

The T10 opens when FI trips, and is used for displaying residual current tripping operations. Pressing test button T trips the F500. Signalling can be tested using the FI signal contact T10. When operated manually (ON/OFF), the FI signal contact does not display any tripping operation. If using an auxiliary and signal contact, the following tripping operations may be displayed:

- Tripping due to pressing test button T
- Tripping due to thermal overload
- Tripping due to a magnetic overload (short circuit)
- Tripping due to undervoltage releases or operating current releases
- Tripping due to residual current tripping operations

With the FI signal contact T10, the user has a further option at their disposal for detecting and differentiating between fault causes.

Application with FI signal contact T10

Signalling specific FI tripping operations in:

- Hospitals
- Industrial plants
- Laboratories
- Telecommunications
- Systems with a great demand for high current availability

Mounting ability of the RCD release signal contact T10

The RCD release signal contact is be mounted by the factory at the right side of the pole of the residual current circuit breaker F500.

2CCC413066F0001

S500-SA
Locking device

The locking device safely prevents unintentional switching on and off of the S500. Simply insert the lug of the locking device through the borehole on the high performance MCB S500 and lock with a padlock with lug diameter of max 4mm (not included in delivery). Even when the high
performance MCB S500 is secured with an locking device against unintentional switching off, tripping remains possible in case of overload or short-circuit by the undervoltage- and shunt
release.

2CCC425007F0001

S500-RD3
Rotary drive

The rotary drive for 1-3 pole or 4-6 pole devices can be delivered for assembly on the switching field door. To the rotary drive are various rotary handles and a pistol grip available. The rotary handles avoid the switching-on of the high performance MCB S500. They could be locked in OFF position and the door lock takes place in ON position except of S500-H2B2 and S500-H2Y2 they permit the opening of the cabinet door.

- Spindle for rotary drive
  - (85 mm) S500-S51
  - (180 mm) S500-S52
- Spindle for pistol grip
  - (265 mm) S500-S56
- Pistol grip S500-H8B, -H8Y
- Rotary drive S500-H2B2, -H2Y2, H2B1, -H2Y1
- Name plate S500-HP2B, -HP2Y

Properties
Accessories

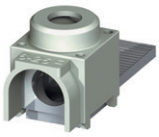
2CCC425017F0001

S500-AK20

S500 Busbar terminal

Busbar terminals are used for powering live conductors arranged vertically or horizontally. Individual devices can be replaced at a later stage without tripping the busbars.
Max. connection cross-section are:

- Round conductor 50 mm2 oder 16 mm^2
- Square 36 mm2 oder 20 mm^2
- Flat copper 6 x 20 mm oder 5 x 10 mm



2CCC425012F0001

S500-K1

Terminal, insulated

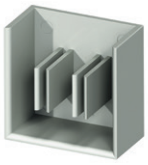
The insulated terminal is for rear connection of the main contacts.
The connection cross-section is max. 25 mm2 for copper cable or strand.

2CCC425020F0001

S500 Busbar system

The S500 busbar system is comprised of:

- Busbar
- End cape
- Line terminal, insulated



2CCC425010F0001

The comb-shaped busbar is used for powering horizontally arranged live conductors. In addition to the comb-shaped busbar, the system incorporates the insulating cover and end caps.
The max. rated operational voltage Ue is 400/690 V a.c.
Conductor cross-section is 35 mm2. The power can be supplied from centre or from the side – for supply from centre, 250 A is the maximum. For supply from the side, 125 A is the maximum.
The S500-BB44 comb-shaped busbar is for 4 x 4-pin switches with separate neutral conductor bar, and can be used for 3-pin switches with auxiliary and/or signal contact.
The S500-EK end cap is used as contact protection after cutting the busbars to length.
The line terminal is intended either for 2 and 3-pin S500-K2 or 4-pin S500-K3 comb-shaped busbars.

S500-ME1

Flush-mounting

The flush-mounting is for fitting in front panel or door.

S500-ME1	insertion width 38 mm
S500-ME2	insertion width 88 mm
S500-ME3	insertion width 184 mm

2CCC425004F0001

S500-A1

Terminal cover

The terminal cover is for insulation the connecting terminal according to IP40.

2CCC425022F0001

S500-F2

Intermediate piece

The intermediate piece is for compensating the unit widths of 18 mm.

S500-F1	12.5 mm wide
S500-F2	6 mm wide

Properties
Definitions

Rated short-circuit breaking capacity I_{cn}
Compliant to EN 60898-1
The maximum current which a switching device can switch off without damage at a rated operational voltage and rated operational frequency. It is specified as an effective value.

Rated ultimate short-circuit braking capacity I_{cu}
Compliant to EN 60947-2
Ultimate short-circuit breaking capacity that a circuit breaker can switch off without damage at a rated operational voltage and rated operational frequency. It is specified as an effective value.

Rated service short-circuit breaking capacity I_{cs}
Compliant to EN 60947-2
Service short-circuit breaking capacity that a circuit breaker can switch off without damage at a rated operational voltage and rated operational frequency. It is specified as an effective value.

Rated insulation voltage U_i
The rated insulation voltage (Ui) is the voltage to which dielectric checks and creepage distances refer. The maximum rated operational voltage must not exceed its rated insulation voltage.

Rated impluse withstand voltage U_{imp}
Peak of a withstand voltage of a specified form and polarity with which the circuit can be loaded under specified test conditions without a breakdown and to which clearances relate. The rated impulse withstand voltage must be equal to or greater than the values of the withstand over-voltages (transient overvoltages) which occur in the System in which the device is used.

Backup protection
Assignment of two overcurrent protective devices in series, where the protective device, generally but not necessarily on the supply side, effects the overcurrent protection with or without the assistance of the other protective device and prevents excessive stress on the latter [IEC 60947-1, definition 2.5.24].

Total selectivity
Overcurrent discrimination where, in the presence of two overcurrent protective devices in series, the protective device on the load side effects the protection without causing the other protective device to operate [IEC 60947-2, definition 2.17.2].

Partial selectivity
Overcurrent discrimination where, in the presence of two overcurrent protective devices in series, the protective device on the load side effects the protection up to a given level of overcurrent, without causing the other protective device to operate [IEC 60947-2, definition 2.17.3].

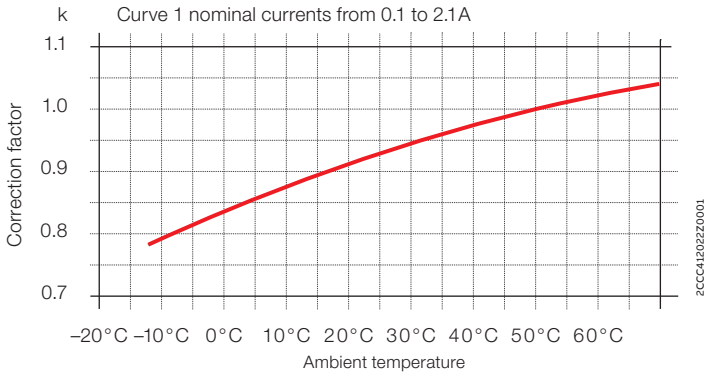
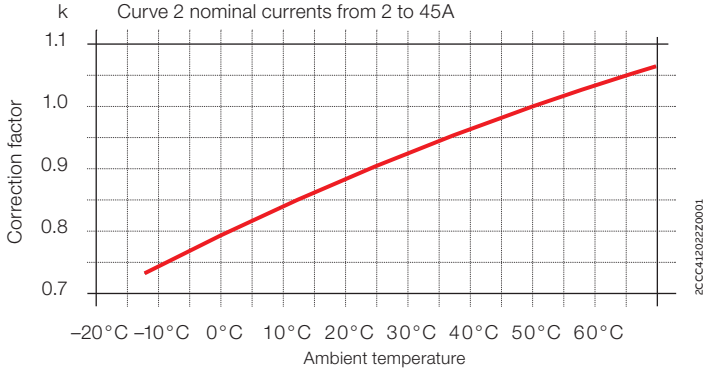
Internal resistance and power losses concerning the ambient temperature





Example:
Motor 2.2 kW; Ie = 5 A at 380 V a.c. for 0°C ambient temperature
High performance circuit breaker S500-K 3.8 … 5.3 A
According to curve 2 correction factor k = 0.84
Current setting on S500-K breaker: k x Ie = 0.84 x 5 A = 4.2 A

Technical data
