

Model Number

ENA36IL-R***-CANopen

Features

- · Very small housing
- Up to 31 bit overall resolution
- **CANopen interface**
- Free of wear magnetic sampling
- High resolution and accuracy

Description

This absolute rotary encoder provides a position value corresponding to the shaft position on its integrated CAN bus interface. The integrated CANbus interface supports all CANopen functions. Thus the following modes can be programmed to either enabled or disabled:

- Polled Mode
- Cyclic Mode
- Sync Mode

Technical data

General specifications

magnetic sampling Detection type Device type Absolute encoders Linearity error ≤ ± 0.1 °

Functional safety related parameters

 MTTF_d 480 a at 40 °C Mission Time (T_M) 20 a

L₁₀ 1035 E+8 revolutions at 19/44 N axial/radial shaft load

Diagnostic Coverage (DC) **Electrical specifications**

Operating voltage U_B 9 ... 30 V DC (with galvanic isolation) Power consumption Po ≤ 1.2 W Time delay before availability t_v < 250 ms

CANopen

binary code Output code Code course (counting direction) adjustable

Interface Interface type

Resolution Single turn up to 16 Bit Multiturn up to 15 Bit Overall resolution up to 31 Bit

min. 20 kBit/s, max. 1 MBit/s Transfer rate

Cycle time ≥ 1 ms Standard conformity **DSP 406**

Connection

M12 connector, 5 pin Connector Ø6 mm, 4 x 2 x 0.14 mm² Cable

Standard conformity

DIN EN 60529, IP65 or IP54 Degree of protection Climatic testing DIN EN 60068-2-3, no moisture condensation

FN 61000-6-4:2007 Emitted interference Noise immunity EN 61000-6-2:2005

Shock resistance DIN EN 60068-2-27, 200 g, 6 ms DIN EN 60068-2-6, 20 g, 10 ... 1000 Hz Vibration resistance

Ambient conditions

Operating temperature

cable, flexing: -5 ... 70 °C (-23 ... 158 °F), cable, fixed: -30 ... 70 °C (-22 ... 158 °F) connector models: -40 ... 85 °C (-40 ... 185 °F)

Storage temperature -40 ... 85 °C (-40 ... 185 °F)

Relative humidity $98\ \%$, no moisture condensation

Mechanical specifications

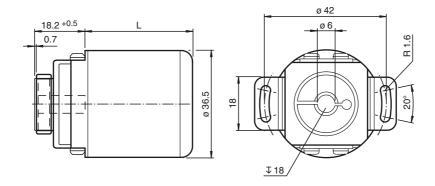

Material

nickel-plated steel Housing Flange Aluminum Shaft Stainless steel approx. 150 g Mass Rotational speed max. 12000 min ⁻¹ 30 gcm^2 Moment of inertia

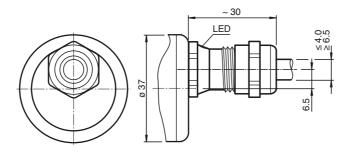

Starting torque < 3 Ncm Shaft load 19 N Axial Radial 44 N

Axial offset ± 0.3 mm static Radial offset ± 0.5 mm static

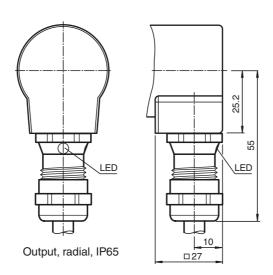

Dimensions

	L [mm]		
Degree of Protection	Axial Output	Radial Output	
IP54	36		
IP65	36	32	

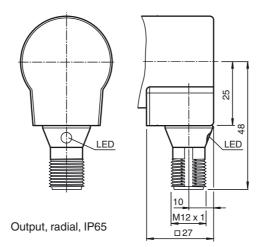

Output, axial, IP65

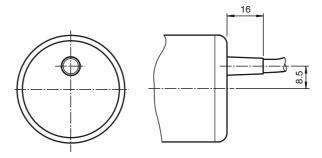

FPEPPERL+FUCHS

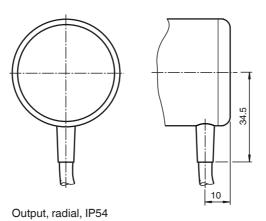

Output, axial, IP65

Output, axial, IP54

Electrical connection

Signal	Wire end	5-pin, M12 x 1 connector
CAN GND	green	1
+V _S	red	2
GND	yellow	3
CAN-High	white	4
CAN-Low	brown	5
Shielding	Shielding	Housing
Pinout		2 (3) 4

Indicating elements

LED-indicator with dual color LED

CAN Run (green)	State	Description
Blinking	Pre-Operational	Boot up message is sent, device configuration is possible, device is in CAN state
		"Pre-Operational"
Single flash	Stopped	The Encoder is in CAN state "Stopped"
On	Operational	The encoder is in CAN state "Operational"
Off		No power supply
Err (red)	State	Description
Off	No error	The Encoder is in operating mode
Flickering	AutoBitrate	Auto baud mode is active and the encoder tries to find within the time out period a
		valid CAN message for baud rate measurement
Single flash	Warning limit reached	At least one of the error counters of the CAN controller has reached or exceeded the
		warning level (too many error frames)
Double flash	Error control event	A guard event (NTM slave or NTM master) or a heartbeat event has occured
On	Bus off	The CAN controller is in stae bus off. No communication possible anymore. Too
		many error frames in the network.

Programmable CAN operating modes

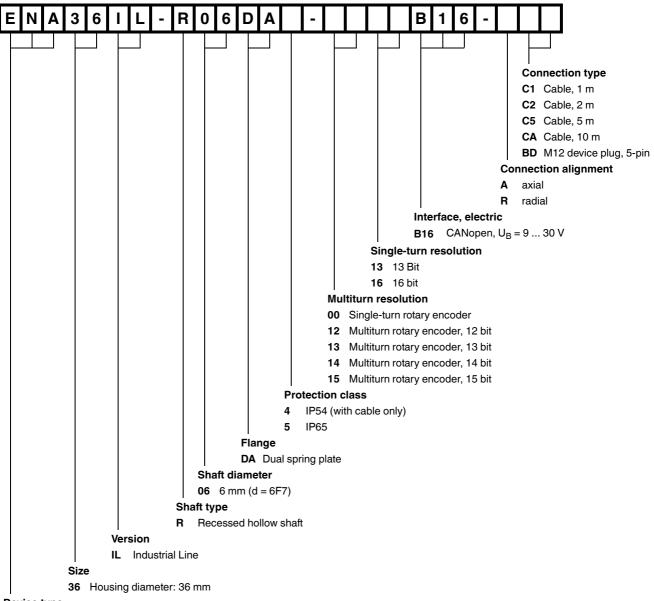

Mode	Explanation
Polled mode	The connected host requests the current actual position value via a remote transmission request telegram. The absolute encoder reads in the current position, calculates all parameters that have been set and sends back the process actual value through the same CAN identifier.
Cyclic mode	The absolute encoder sends the current actual process value cyclically, without being prompted by the host. The cycle time can be programmed in milliseconds for values between 1 ms and 65536 ms.
Sync mode	After the sync telegram has been received by the host, the absolute encoder sends the current actual process value. If multiple nodes should respond to the sync telegram, the individual nodes report one after the other according to their CAN identifier. There is no programming of an offset time. The sync counter can be programmed so that the rotary encoder does not transmit until after a defined number of sync telegrams.

Programmable rotary encoder parameters

Parameter	Explanation	
Operating parameter	The direction of rotation (complement) can be specified by parameter as the operating parameter. This parameter determines the direction of rotation in which the output code will ascend or descend.	
Resolution per revolution	The "Resolution" parameter is used to program the rotary encoder so that a desired number of steps can be implemented in reference to one revolution.	
Preset value	The preset value is the desired position value that must be achieved for a specific physical setting of the axis. The preset value parameter is used to set the actual position value to the desired actual process value.	
Min. and max. limit switch	A total of two positions can be programmed. The absolute encoder sets one bit to high state in the 32 Bit actual process value if a value falls outside the range between these two positions.	
Cam	8 freely programmable cams can be set within the overall resolution. This produces the functionality of a mechanical cam shifting mechanism.
