Chronos 2 electronic timers - Plug-in 8-pin (35 mm)

Relay output 1 or 2 change over relays

- **Multi-function or mono-function**
- **Multi-range (7 ranges, available options)**
- **Multi-voltage**
- **Relay output 1 or 2: 8 A - 250 V (10 A UL)**
- **Plug-in**
- **1 LED status indicators**
- **Option of connecting an external power supply to the control input**
- **3-wire sensor control option**

Technical specifications

Timing	
Repetition accuracy (with constant parameters)	± 0.5 % (CEI 1812-1)
Drift	
- Temperature	± 0.05 % / °C
- Voltage	± 0.2 % / V
Display precision according to IEC 1812-1	±10 % / 25 °C
Minimum pulse duration	
- Typically	30 ms
- Typically under load	100 ms
Maximum reset time by de-energisation	
- Typically	100 ms
Immunity to breaks in supply voltage: typically	>10 ms
Power supply	
Multi-voltage power supply	depending on version, see page 1/21
Frequency	50/60 Hz
Operating range	85 to 110 % Un (85 to 120 % Un for 12V AC/DC)
Load factor	100 %
Maximum power consumption	0.6 W 24V AC/DC 1.5 W 230V AC 32 VA 230V AC
Output elements relay output	
1 or 2 changeover relays, AgNi (cadmium-free)	2000 VA / 80 W
Rated power	2000 V A / 80W
Maximum breaking current	8 A AC 8 A DC
Minimum breaking current	10 mA / 5 VDC
Voltage breaking capacity	250V AC/VDC
Electrical life	10^5 operations 8 A 250V resistive
Mechanical life	5 x 10^6 operations
Breakdown voltage acc. to IEC 1812-1	2.5 kV / 1min / 1 mA /50Hz
Impulse voltage acc. to IEC 664-1 IEC 1812-1	5 kV, wave 1.2 / 50 µs
Display	
State displayed by 1 LED - Flashing green when on Green LED operation indicator ⎍⎍⎍⎍⎍ Pulsing: - timer on, no timing in progress (except functions Di-D and Li-L) ⎍▬▬▬⎍ Flashing: - timing in progress ⎍▬▬⎍ Permanently lit: - Relay waiting, no timing in progress	
Input type - Volt-free contact - 3-wire PNP output control option maximum residual voltage: 0.4 V whatever the timer power supply	0.4 V

Functions

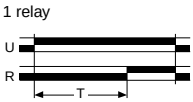
U : Supply
R : Output or load relay
T : Timing

C (Y1) : Control contact
: indefinite

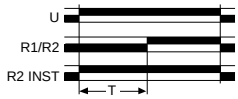
Function A: Delay on energisation

Single timing cycle which begins on energisation.

The output changes state after timing.

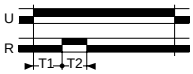


2 relays timed or
1 relay timed and 1 instantaneous



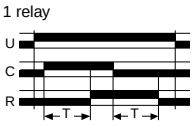
Function Ab: One-shot cycle

The output changes states at the end of the set time T1, for a period T2.
Both T1 and T2 independently adjustable.

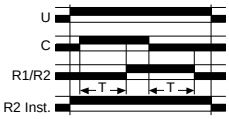


Function Ac: Timing after closing and opening of control contact

After energisation, closure of the control contact causes the timing period T to commence and output relay R (or the load) changes state at the end of this interval. When contact C (Y1) opens, relay R resets after a second timing period T. .

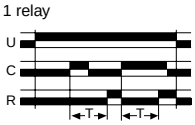


2 relays timed or
1 relay timed and 1 instantaneous



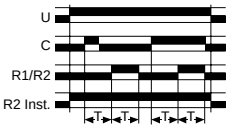
Function Ad : Delay on energisation by switch (not resettable)

After power-up, pressing or holding down the switch starts timing. At the end of timing, the output is energised. The output will be reset the next time the switch is pressed or held down.



Function Ah : Flashing single cycle by switch (not resettable)

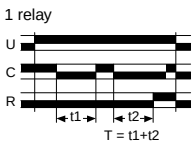
After power-up, pressing or holding down the switch starts timing. At the end of timing, the output is energised. At the end of this second timing, the output falls back to its initial value.



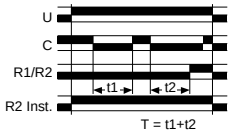
Function At: Timing on energisation with memory

Provides a cumulative time for contact opening.

The output changes states at the end of the set time.



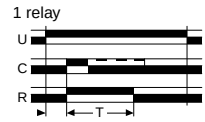
2 relays timed or
1 relay timed and 1 instantaneous



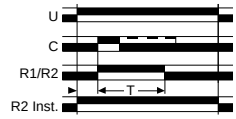
Function B: Timing on impulse one shot On pulse (with constant supply)

After energisation; a pulse (≥ 50 ms) or a maintained control contact will cause the output to change state which reverts to the rest position at the end of timing.

N.B. : this process enables shortening or lengthening of a signal.

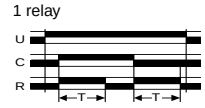


2 relays timed or
1 relay timed and 1 instantaneous

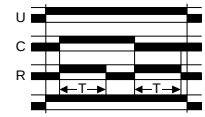


Function Bw: Pulse output (adjustable)

AOutput relay R (or the load) changes state, and remains in the changed-over state for the timing period, both when control contact C (Y1) closes and when it opens.



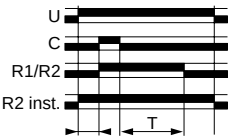
2 relays timed or
1 relay timed and 1 instantaneous



Function C: Timing after impulse Delay OFF (with constant supply

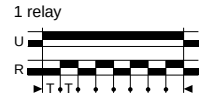
After energisation, once the control contact is closed the output state changes.
Timing will only begin on the re-opening of this control contact (one shot).
Relay R returns to its initial position at the end of the timing period.

2 relays timed or
1 relay timed and 1 instantaneous



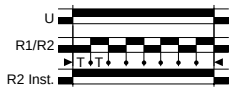
Function D or Di: Flip-flop

Repetitive cycle which switches the output alternately between the rest and operating position for equal time bases.
T1 + T2 = T total

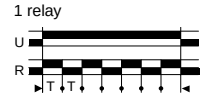


Function D: the cycle begins with the output in rest position. Pause start.

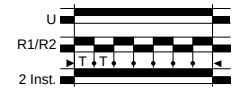
2 relays timed or
1 relay timed and 1 instantaneous



Function Di: the cycle begins with the output in the operating position. Pulse start.



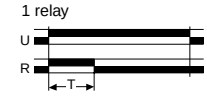
2 relays timed or
1 relay timed and 1 instantaneous



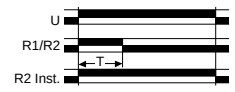
Function H: Timing on energisation Interval timer - one shot

On energisation, the output changes state, remains in that state for the duration of timing and resets at the end of the single cycle.

N.B. This is complementary to function A.

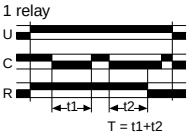


2 relays timed or
1 relay timed and 1 instantaneous

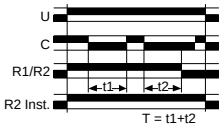


Function Ht : Delay on energisation with memory

Provides a cumulative time for contact opening. On energisation, the output changes state, remains in that state for the duration of timing and resets at the end of the single cycle.

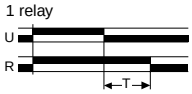


2 relays timed or
1 relay timed and 1 instantaneous

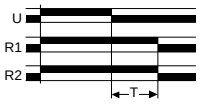


Function K: Delay on de-energisation - True delay OFF

On energisation, the output changes state. On de-energisation timing commences and the output only returns to the reset condition after timing.



2 relays timed or
1 relay timed and 1 instantaneous



Function L : Cyclic timing - Asymmetrical recycler

Repetitive cycle comprising 2 independent adjustable time bases. Each time base corresponds alternately to a different output state.

N.B. : The cycle starts with the output in the rest position.

2 relays timed or
1 relay timed and 1 instantaneous

Function Li : Cyclic timing - Asymmetrical recycler

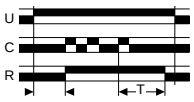
Repetitive cycle comprising 2 independent adjustable time bases. Each time base corresponds alternately to a different output state.

N.B. : The cycle starts with the output in the operating position.

2 relays timed or
1 relay timed and 1 instantaneous

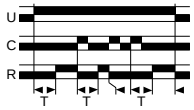
Function N : "Safe-guard"

At the first control pulse the output is energised.
To complete the timing the interval between the two control pulses must be greater than the timing set.



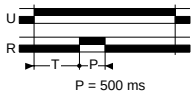
Function O : "Delayed safe-guard".

On energisation, a first timing sequence occurs and the output changes state.
With the closing of the control contact, the output resets and the timing starts, with the output being activated after timing.
For the timing to be completed, the interval between the closing of two control contacts must be greater than the timing set.



Function P : Delayed fixed-length pulse

Timing begins on energisation. At the end of the timing period output relay R (or the load) changes state for a period of approx. 500 milliseconds.



Function Pt : Impulse counter (delay on)

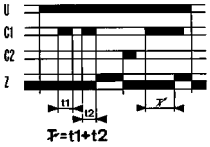
Calculates the total opening time of a contact. At the end of timing, the output is energised for approximately 500 ms.

Function Q : Star-delta"

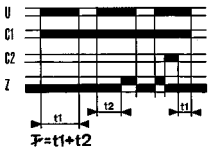
At the end of timing, the output is not energised. It remains "open" (not conducting) and will only change state after the fixed time of Ti has elapsed.
Dwell time selectable

Function T : Timing on energisation with memory

a - energisation by control signal
The timer sums the times for which the control contact is closed (C1).
Reset is by the reset signal (C2) only.



b - energisation by supply voltage
The timer sums the times for which the supply voltage (U) is on.
Reset is by the reset signal (C2) only

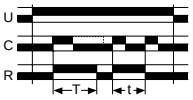


Function T : Impulse relay

After power-up, pressing or holding down the switch closes the relay. Pressing the switch a second time opens the relay.

Function Tt : Timed impulse relay

After power-up, pressing or holding down the switch closes the relay and starts timing. The relay opens at the end of timing or when the switch is pressed a second time.



Function W : Timing after pulse on control contact

After energisation, if the control contact opens it causes output relay R (or the load) to change state and timing to start. At the end of the timing period, relay R resets to its original state.
