

## Product Description

The analog switching relay provides a number of full cycles, evenly distributed over a fixed period, depending of the control input. The input of $4-20 \mathrm{~mA}$ or 0-10 VDC respectively, corresponds to zero and full output within a period of 1.28 s @ $50 \mathrm{~Hz}(1.07 \mathrm{~s} @ 60 \mathrm{~Hz}$ ). This principle makes the transfer characteristics fully linear. The
principle operates with zero switching, thus ensuring a reduced level of radiated and wire conducted noise. The 2pole type has alarm LED indication by loss of master phase. The analogue Full Cycle Switching is not recommended for light control due to light-flickering.

- AC solid state relay, 1- and 2-poles
- Analog switching for resistive loads (heating)
- 4-20 mA or 0-10 V controls
- Rated operational current: 1-pole : 30A and 50A 2-pole: 2 x15A and $2 \times 25 A$
- Rated operational voltage up to 480 VAC
- LED-indication for normal operation and alarm status
- IP 20 protection
- DIN-rail mountable
