- · Limit switch for liquids
- External function test with test magnet
- Onsite function check possible thanks to LED indication
- Large selection of process connections for hassle-free installation in existing systems
- Easy to install even at points difficult to access due to compact design
- · Rugged stainless steel housing
- Suitable for process temperatures up to 150 °C (302 °F)
- · Cost-saving plug connections
- Approval as overfill protection and leak detection system acc. to WHG

Function

The Vibracon LVL-A7 is a limit switch for liquids and is used in tanks, vessels and pipes. The device is used for overfill prevention or pump protection in cleaning and filter systems as well as in cooling and lubrication vessels, for instance.

The device is suitable for applications in which float switches or conductive, capacitance and optical sensors have been used up to now. The device also works in areas where these measuring principles are not suitable due to conductivity, buildup, turbulence, flow conditions or air bubbles.

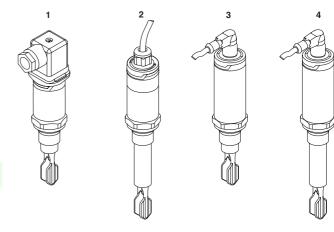

The device can be used for process temperatures up to:

- 100 °C (212 °F)
- 150 °C (302 °F)

The device is not suitable for use in hazardous areas.

For hygienic areas we recommend the use of Vibracon LVL A7H.

Assembly

- 1 Compact version with valve plug
- 2 Short tube version with cable3 Compact version with M12 plug
- Short tube version with M12 plug
- Further device versions see technical information (TI).

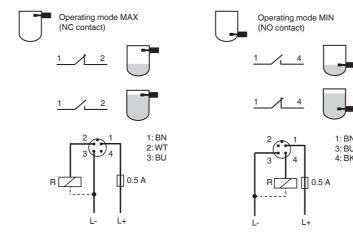

Connection

Example: electrical connection with M12 plug Further electrical connections see technical information (TI).

General specifications
Measuring method

Construction type

The tuning fork is brought to its resonance frequency by means of a piezoelectric drive. If the tuning fork is covered by liquid, this frequency changes. The electronics monitor the resonance frequency and indicate

whether the tuning fork is freely vibrating or is covered by liquid.

Mounting position

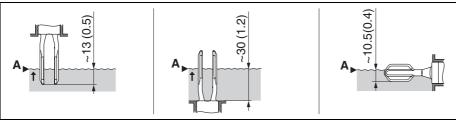

The device can be installed in any position in a vessel, pipe or tank. Foam formation does not affect the function.

- Overfill prevention or upper level detection
- 2 Lower level detection
- Dry running protection for pump

Switch Point

The switch point (A) on the sensor depends on the orientation of the limit switch (water +25 °C (+77 °F), 1 bar (14.5 psi).

Vertical and horizontal orientation, dimensions in mm (inch)

This overview does not mark options which are mutually exclusive.

Option with * = on request/in preparation.

Option with ** = multiple options can be selected
