

STT700 SmartLine Temperature Transmitter Specification

34-TT-03-19, July 2017

Introduction

Part of the SmartLine® family of products, the SmartLine STT700 is a high performance temperature transmitter offering high accuracy and stability over a wide range of process and ambient temperatures. SmartLine easily meets the most demanding needs for temperature measurement applications.

Best in Class Features: The STT700 is single or a dual input temperature transmitter that supports millivolt, thermocouple and RTD sensors. It is available with either HART or DE protocol output.

High performance

- Digital accuracy up to 0.15 Deg C for Pt100
- Stability up to $\pm 0.05\%$ of URL per year for ten years
- 500 mSec update time (single input)
- 1 Sec update time (dual input)

Reliable measurement

- Built in galvanic isolation
- Sensor break detection
- Comprehensive on-board diagnostic capabilities
- Full compliance to SIL 2/3 requirements.
- Available with 4-year warranty
- Supports Namur 89 Wire break
- Direct entry of Callendar-van Dusen coefficients R_0 , α , δ and β for calibrated RTD sensors.

Lower Cost of Ownership

- Universal input
- Dual sensor option
- External zero, span, & configuration capability
- Polarity insensitive loop wiring

Figure 1– SmartLine STT700 Temperature Transmitter (HART) module shown with dual input capability

Communications/Output Options:

- 4-20 mA DC
- HART® (version 7.0)
- Honeywell Digitally Enhanced (DE)

All transmitters are available with the above listed output and communications protocol option.

Mounting Options:

- Direct sensor head mounting in DIN Form A aluminum housing.
- Other mounting options available include wall, pipe, DIN Rail or single compartment field housing.

Description

Part of the SmartLine® family of products, the SmartLine STT700 is a high performance temperature transmitter offering high accuracy and stability over a wide range of process and ambient temperatures. The STT700 addresses the broadest market applications by providing a temperature transmitter that can meet the bulk of the industrial application needs. The STT700's versatility, including the ability to select single or dual input, HART or DE protocol, with or without display, various mounting configurations, and the ability to connect to 2, 3 or 4-wire sensors types, allows your site to standardize on a single product and thus simplifying support and training.

Configuration Tools

Hand Held Configuration

SmartLine transmitters feature two-way communication and configuration capability between the operator and the transmitter. This is accomplished via Honeywell's field-rated Multiple Communication Configuration tool. The Honeywell handheld MC Toolkit is capable of field configuring HART and DE devices and can also be ordered for use in intrinsically safe environments.

All Honeywell transmitters are designed and tested for compliance with the offered communication protocols and are designed to operate with any properly validated handheld configuration device.

Personal Computer Configuration

HART Communicator Model 375, 475 or MC Toolkit for HART 7 Models.

Field Device Manager (FDM) Software and FDM Express are also available for managing HART and DE device configurations (FDC).

Smart Field Communicator (SFC) for DE Models

Diagnostics

SmartLine transmitters all offer digitally accessible diagnostics which aid in providing advanced warning of possible failure events minimizing unplanned shutdowns, providing **lower overall operational costs**

System Integration

- All SmartLine products communications protocols meet all of the most current published standards for HART
- SmartLine STT700 is fully compatible with Honeywell's DE protocol.

STT250 Compatibility

The STT700 design allows it to easily replace an existing STT250 Temperature Transmitter. The STT700 physically will fit into an existing STT250 mount and the STT700 offers the same functions as a STT250.

Performance Specifications^{1,3}

Reference Accuracy ² (conformance to +/-3 Sigma)

Input Type	Maximum Range Limits		Digital Accuracy (+/-)	Output D/A Accuracy (% of span)	Standards
	° C	° F			
RTD (2,3,4 wire)					
	° C	° F	° C	%	
Pt100 ($\alpha=0.00385$)	-200 to 450 -200 to 850	-328 to 842 -328 to 1562	0.15 0.25	0.025	IEC751:1990

L ⁵	-0 to 800 -200 to 800	-32 to 1472 -328 to 1472	0.50 0.90	0.025	GOST R 8.585-2001

Other Input Types	Maximum Range Limits	Digital Accuracy (+/-)	Output D/A Accuracy (% of span)	Standards
Millivolts	-7 to 22 mV	0.010 mV	0.025	
Millivolts	-20 to 125 mV	0.015 mV	0.025	
Ohms	0 to 500 Ohms	0.35 Ohms	0.025	
Ohms	0 to 2000 Ohms	0.50 Ohms	0.025	

1. Digital Accuracy is accuracy of the digital value accessed by the Host system and the handheld communicator
2. Total analog accuracy is the sum of digital accuracy and output D/A Accuracy
3. Output D/A Accuracy is applicable to the 4 to 20 mA Signal output
4. For TC inputs, CJ accuracy shall be added to digital accuracy to calculate the total digital accuracy
5. Not available in DE transmitters.
6. Japanese Pt100J ($\alpha=0.003916$) may be obtained by using the CVD algorithm with Pt100D.

Differential Temperature Measurement

SmartLine STT700 Temperature supports differential temperature measurements for dual input transmitters. When the loop current mode is set to "Differential" then the input range is from A to B for sensor 1 & 2 where

A = Sensor 1 Minimum - Sensor 2 Maximum
 B = Sensor 1 Maximum - Sensor 2 Minimum

Digital Accuracy for differential temperature measurement

- If both input types are the same, then the digital accuracy equals 1.5 times the worst case accuracy for that input type.
- If the input types are different, then the digital accuracy equals the sum of the worst case sensor 1 and sensor 2 accuracies. For example, assume that input 1 is a J T/C and input 2 is an R T/C. Assume that the desired operating range is between 0 and +400 °C. The digital accuracy for a J T/C in this range is 0.30 °C and the digital accuracy for an R T/C in this range is 1.00 °C. Therefore, the worst case digital accuracy would be 1.30 °C.

Callendar - Van Dusen Algorithm (CVD)

The easy to use Callendar - Van Dusen (CVD) algorithm allows the use of calibrated platinum RTD sensors to increase the overall system accuracy. Simply enable the algorithm and then enter the four CVD coefficients supplied with the calibrated RTD sensor into the transmitter. Honeywell can preprogram the CVD constants at the factory when the Custom Configuration option is selected and the CVD constants are supplied at order entry.

Performance under Rated Conditions – All models

Parameter	Description
Input Span Adjustment Range	No limits to adjustments within the maximum range except minimum span limit of 1 engineering unit
Analog Output	Two-wire, 4 to 20 mA
Digital Communications:	HART 7 protocol compliant Honeywell Digitally Enhanced (DE) protocol compliant
Output Failure Modes	Honeywell Standard: NAMUR NE 43 Compliance: Normal Limits: 3.8 – 20.8 mA 3.8 – 20.5 mA Failure Mode: ≤ 3.6 mA and ≥ 21.5 mA ≤ 3.6 mA and ≥ 21.5 mA
Output Accuracy	±0.025 % span
Supply Voltage Effect	0.005 % span per volt.
Transmitter Turn on Time (includes power up & test algorithms)	HART or DE: 6 sec.

Analog Input	Stability: 0.05% of URL per year for 10 years Maximum Lead Wire Resistance: Thermocouples and millivolts: 25 ohms/leg RTD and ohms: 25 ohms/leg
Response Time (delay + time constant)	Analog Output 500 mSec to reach 96% of final value with 0 seconds damping
Update time	500 mSec for Single Input Units 1 Sec for Dual Input Units
Damping Time Constant	HART: Adjustable from 0 to 102 seconds in 0.1 increments. Default: 0.50 seconds DE: Discrete values 0.0, 0.3, 0.7, 1.5, 3.1, 6.3, 12.7, 25.5, 51.1, 102.3 seconds. Default: 0.3 seconds
Ambient Temperature Effect	Digital Accuracy For all RTD (except Pt200) and 500 ohm Input Types: 0.017 ohms/°C For RTD Pt200 and 2000 ohm Input Types: 0.034 ohms/C. Output D/A: 0.0045 % of span/°C
Cold Junction Accuracy	±0.5 °C
Total Reference Accuracy	Digital Mode Digital Accuracy + C/J Accuracy (T/C input types only) Analog Mode (HART only) Digital Accuracy + Output D/A Accuracy + C/J Accuracy (T/C input types only) Example: Transmitter in Analog Mode with Pt100 sensor and 0 to 200°C range Total Reference Accuracy = 0.15 °C + (200 °C / 100%) * 0.025% = 0.20 °C
Sensor Burnout	Burnout detection is user selectable. Upscale or down scale with critical status.
Vibration Effect	Per IEC60770-1 field or pipeline, high vibration level (10-2000Hz: 0.21 displacement/3g max acceleration)
Electromagnetic Compatibility	IEC 61326-3-1
Isolation	2000 VDC (1400Vrms) Galvanic isolation between inputs and output.

Performance under Rated Conditions – All models

Stray Rejection	Common Mode <i>AC (50 or 60 Hz):</i> 120 dB (with maximum source impedance of 100 ohms) or ± 1 LSB (least significant bit) whichever is greater with line voltage applied. <i>DC:</i> 120 dB (with maximum source impedance of 50 ohms) or a ±1 LSB whichever is greater with 120 VDC applied. <i>DC (to 1 KHz):</i> 50 dB (with maximum source of impedance of 50 ohms) or ±1 LSB whichever is greater with 50 VAC applied. Normal Mode <i>AC (50 or 60 Hz):</i> 60 dB (with 100% span peak-to-peak maximum)
EMC Compliance	EN 61326-1 and EN 61326-3-1 (SIL)
Lightning Protection Option	Leakage Current: 10 uA max @ 42.4 VDC 85 °C Impulse rating: 8/20 uS 5000 A (>10 strikes) 10000 A (1 strike min.) 10/1000 uS 200 A (> 300 strikes)

Materials Specifications - All models

Parameter	Description
Terminal Block and Module Housing	Lexan 500R (Polycarbonate, Glass Fiber Reinforced 10%)
Connection Screws	M3 Nickel Plated Brass
Weight	0.075 kg (0.2 lbs)

Operating Conditions – All models

Parameter	Reference Condition		Rated Condition		Operative Limits		Transportation and Storage	
	°C	°F	°C	°F	°C	°F	°C	°F
Ambient Temperature	25±1	77±2	-40 to 85	-40 to 185	-40 to 85	-40 to 185	-55 to 120	-67 to 248
Humidity %RH	10 to 55		0 to 100		0 to 100		0 to 100	
Supply Voltage Load Resistance	HART Models: 10.8 to 35.0 VDC at terminals (IS installations limited to 30 VDC) 0 to 1,100 ohms (as shown in Figure 2) DE Models: 10.8 to 35 VDC at terminals (IS installations limited to 30 VDC) 0 to 750 ohms (as shown in Figure 3)

Figure 3 – DE Supply voltage and loop resistance chart & calculations

Physical Mounting and Construction

The STT700 Temperature Transmitter is designed to be mounted in a DIN Form A aluminum housing for direct installation with the temperature sensor or can be provided in a remote pipe or wall mount housing. Details for the available housings are in document #EN01-6032. The STT700 temperature transmitter module can also be DIN rail mounted to a top hat or “G” rail via a clip.

Integral Meters

Honeywell’s Series STT700 temperature transmitters can be supplied with local or remote indication. An Engineering Units (EU) meter can be mounted integral to the transmitter inside the field mount housing. Order an integral meter as part of the model number; Table III _ _ _ 1 _ . Order a remote meter as model RMA300. The EU meter displays temperature in engineering units. DE transmitters can use the EU Meter as long as they are configured to operate in the analog mode. Refer to document #34-ST-25-08D for more details.

Lightning Protector

This device is designed to give the Smart temperature transmitter maximum protection against surges such as those generated by lightning strikes. It mounts right on the top of the STT700 transmitter module, providing easy field wiring and also protection for the EU meter if used.

It mounts on the top of the STT700 transmitter module, providing easy field wiring. The compact mounting allows the use of a variety of housings including the Honeywell explosion proof field mount housing. See [Figure 4](#).

Refer to document #34-TT-03-20, Lightning Protection spec for more details.

The device can be used in both intrinsic safety and flame/explosion proof applications.

Notes

Operating Parameters:

4-20 mA/HART (Loop Terminal) - Voltage= 10.58 to 35 V, Current = 4-20 mA Normal (3.8 – 21.5 mA Faults)

Intrinsically Safe Entity Parameters

For details see Control Drawing in in section A.7 of this manual

The Model Selection Guide is subject to change and is inserted into the specification as guidance only. Prior to specifying or ordering a model check for the latest revision Model Selection Guide which is published at:

Model Selection Guide

Model STT700 Smart Temperature Transmitter

Model Selection Guide

34-44-16-21 Issue 1

Instructions: Make selections from all Tables Key through XIII using column below the proper arrow. Asterisk indicates availability. Letter (a) refer to restrictions highlighted in the restrictions table. Tables delimited with dashes.

Key	I	II	III	IV	V	VI	VII	VIII
STT700	-	-	-	-	-	-	-	-

KEY NUMBER	Input Type
	Universal Input

Availability Selection	
STT700	*

Table I	Inputs and Outputs
a. No. Inputs	Single sensor input (4 terminations)
	Dual TC or RTD sensor inputs (5 terminations)
b. Output / Protocol	Analog Output
	4-20mA DC
	4-20mA DC
	Digital Protocol
	HART Protocol
	DE Protocol
