Reflex Sensor
with Background Suppression

P1KH002
Part Number

- **Condition monitoring**
- **IO-Link 1.1**
- **Low switching distance deviation for black/white**
- **Reliably detect objects against any background**

The reflex sensor with background suppression works with red light according to the angle measurement principle and is designed to detect objects against any background. The sensor always has the same switching distance, regardless of the color, shape and surface of the objects. They can even reliably differentiate between bright and dark objects on the smallest of parts. This means that minimal height differences can be detected, for example, when differentiating various components from one another. The IO-Link interface can be used to configure the reflex sensors (PNP/NPN, NC/NO, switching distance), as well as for reading out switching statuses and distance values.
